Doc Name : Excellent for <u>ALL Species</u> (& farm animals) breeders etc.	Related Products :
Last Updated: 12-01-17	

Homeopathic complex

1. HAMPL Birth Eze 30ml

A natural and gentle formula for assisting in ease of birth, prevention of infections, miscarriages, whelping and healing, bleeding and pain afterwards. For animals and pets who have shown a history of miscarriages or re-absorption problems

Apply a dose twice a week during the first and second month of pregnancy. Then once a week.

2. HAMPL Milk FLOW 30ml

Contains a homeopathic complex, use if needed.

3. HAMPL Calm Eze 30ml

contains a homeopathic complex: prevent or assist from pain, fear or stress mum or babies. Larger bottles are available on request.

To insure your new born babies are strong and healthy, avoid vaccinations before during and after breeding. Can If you need to use safe alternative to injections. Vaccinations can overwhelm infants and worse still they will become very sick from it as their immune system has not fully developed yet. Not strong enough to handle all those toxins. If this happens they immune can also shut done as they it goes into shock.

Vaccine Homeopathic Oral Nosode immunizations can be used safely on 4 week old kittens and puppies. Parents are also healthier and stronger if also given the natural oral immunizations. Or get a Titre anti body immunity blood test will show (your and your vet or kennel association) that your animals are still fully covered (as one vaccination lasts a lifetime in the system)

Homeopathic SEPIA 30C & PITUITARY 30C: For bitches that do not come in season or the seasons are not normal. In clinical practice these remedies help the majority of cases. Dosage : Sepia 30c one dose every 10 days for 3 doses in a month. Pituitary 30c one dose in the beginning of the month.

PHANTOM PREGNANCY

Refer to: (AN180) HAMPL Phantom Aid 30ml

PYMOETRA

Refer to: (AN065) HAMPL PYMOETRA Infection (Set of 2) As infection can threaten the dogs life, signs of list ness with infection, needs emergency hysterectomy.

FADING SYNDROME

Refer to: (AN112) HAMPL Pneumonia Treatment Set - drops go onto body for fast prevention or relief.

Testimony

Kristina (cat) had her babies this morning. She had 6 - a big first litter.

The Calm eze has worked well for her, I could see it work a few minutes after using the drops. She stopped panting and ate. Kristina's first day with the babies was not very good, she sat at my bedroom door shouting to me. When I went to her she would run frantically to the babies- even sit on them and not know. She hid 1 in my shoes in the wardrobe, she had a mournful cry, she couldn't get to her baby. The 2nd day after using HAMPL Calm eze had such a huge difference. She has not left the babies, they are feeding.

Kristina's breathing has settled to a normal rate, the kneading when purring has slowed down as well. In all she is very happy, contented, relaxed and looking proud. The babies are the most relaxed I have had!!!

*No crying (3 days old) or squabbling over a nipple. They look very crisp, their noses are a deep pink. I'm really very happy with the HAMPL Calm eze, thank you a million. **Claire***

Hi Diana, Isabelle has just delivered 6 beautiful fat pink babies - all alive.

After the third baby she was panic panting with her tongue out, I gave your HAMPL Calm eze every 10 mins x 3 times. She settled quickly and delivered the other 3 babies without a problem. So everything has worked out well with your help again.

Side effects from vaccines

will produce a toxic build-up which may be the reason for unexplained symptoms such as (when before vaccine you had a healthy pet)

Lack of energy, vertigo, headaches, numbness, pins and needles, muscle weakness, neuralgia, behavioural changes, hyperactivity, learning disability, depression, insomnia, irritability, anaemia, hypertension, abdominal pains, loss of weight, asthma, allergies, skin disorders, weakened immunity system.

~ If you happened to have a pet that has a **chemical sensitivity**, then your pet will have acute and sometimes fatal reactions - within 2 days or same day of injection.

FURTHER INFORMATION

Nosodes have been used in homeopathic medicine since the mid 1800s. Nosodes are relatively unknown in veterinary practice and somewhat controversial in holistic veterinary practice. Many benefits have been noted, including a decrease in the severity and frequency of disease. Although nosodes are still controversial as a replacement for traditional vaccinations, evidence of their safety and efficacy is growing.

What are Nosodes?

Nosodes are specialized homeopathic remedies that are prepared by taking actual diseased matter from a sick animal such as diseased tissue or nasal discharge. The preparation of a nosode involves a lengthy process of succussion and dilution of the original material using traditional homeopathic protocols until virtually no molecules of the crude substance remain, rendering the nosode safe for use.

This process, called potentization, inactivates the original disease substance and converts the material into a bioenergetic remedy which interacts with the body's energy field. The final product is a potent remedy that is an energetic blueprint of the actual disease.

Human Nosode Research

Dr. Isaac Golden, an Australian homeopath, has done extensive research in the field of homeopathic childhood immunizations. Working directly with families who agreed to participate in a clinical trial of typical childhood diseases, Dr. Golden concluded that homeopathic immunizations were 90.4% effective.

From 2001 to 2004, Dr. Golden also studied vaccine safety compared to homeopathic immunizations. He found that children who received standard vaccines were 15 more times likely to get asthma, 7 times more likely to get eczema and 2 times more likely to get allergies than those who were immunized by homeopathic preparations. His work is published in his ground breaking books, 'Vaccination and Homeoprophylaxis: A Review of Risks and Alternatives', and 'Homeoprophylaxis: A Ten Year Clinical Study'.

Homeopathic Immunization in Dogs

Dr. Christopher Day, British veterinary homeopath, has been using nosodes in his practice for 35 years. Evidence of reduced rates of distemper, hepatitis, leptospirosis, parvovirus and kennel cough has encouraged him to recommend nosodes to his clients for prevention and treatment of disease. In 1985, Dr. Day documented the successful use of nosodes in a kennel cough outbreak. The trial was done in a day care and there were 214 dogs participating, including both vaccinated and unvaccinated dogs. The nosode was introduced by placing it in the dogs' drinking water. Remarkably, out of a total of 214 dogs that were treated with the kennel cough nosode, the incidence of actual, full-blown disease was only 1.9% out of 214 dogs, and the majority of dogs who did contract kennel cough exhibited only minor symptoms. The vaccinated dogs had a higher incidence of disease at 4.7% whereas only 0.7% of the unvaccinated dogs showed symptoms. Minor symptoms were expressed by 42.5% of the dogs, with 59.7% of vaccinated dogs showing minor symptoms, compared to 26.7% of unvaccinated dogs. This study shows that nosodes can be effective in disease prevention, and when dogs do contract disease, the severity of symptoms can be reduced with their use.

NB. Instead of vaccination injections, if you are unsure about continuing vaccinations or not, ask instead for a Titer test (anti bodies immunity test).

Every time you get this test done it will show you that your pet is still fully immunized for all disease. The nosodes do not produce a titer response.

Non Drug Pet Prescription

HAMPL Canine Oral Nosodes C6 30ml (1.oz)

Contains homeopathic nosode complex: Canine Distemper nosode, Canine Hepatitis nosode, Parvo nosode, (Canine flu) Parainfluenza nosode, Bordatella nosode (Kennel Cough), Borrelia Burgdofer ibacteria nosode (**lyme infection**), Ledum 30C.

A homeoprophylaxis will help maintain a Canine immunity against viral and bacterial infection of Canine Distemper.

Dosage Instruction, **Canine Certificate** with recommended Boarding Kennel List (Aust only) included. One bottle will treat several dogs and puppies for many years.

KENNELS, SHELTERS and REFUGES.

(will protect hundreds of Canines - puppies and adults)

Dosing: easy to apply large numbers of pets, adding a dose some food.

~ RABIES for International Clients.

International Clients we will also receive the energetic homeopathic **Rabies Oral NOSODE** will also included in separate satchel. **It has been accepted with Animal Control personals to rabies injections.** The Rabies nosodes do not produce a titer response.

Rabies Oral Nosode pills.

Contains alcohol and water with active ingredient Lyssin nosode 200C.

Which is called a "homeoprophylaxis" which maintains a Canine or Felines immunity to the Rabies infection.

FACT: Rabies is a virus that in the U.S. is usually transmitted by a bite from a wild infected animal, such as a bat, raccoon, skunk, or fox. If a bite from a rabid animal goes untreated and rabies develop.

Plus request the "Rabies Vaccines DETOX" from toxic side effects from injection.

You can try and detox you pet from side effects. With your order you can do a Special Request for us to also add the

(Order Code AN047-3) RabiesVac Detox homeopathic formula 30ml (no cost) Does your pet any acute or chronic behaviour changes. eg seizures, disorientated, growling in pain when touched, fearful, lethargic, not real interested in eating, sometimes lumps or arthritis gets worse than ever with pain are some of the few. By using a homeopathic detox, may help, but will not repair or prevent damages to the nervous system. Always use safe alternatives to drugs.

DETOX

HAMPL_RabiesVac DETOX 30ml(1.oz)

Contains alcohol and water with active ingredient: Lyssin nosode MM, Carduus Mar 30X, MM, Rabies Nosode Vacc 6C, Rabies Immunoglobulin 12X, Belladonna 200C, 10M, (NAR) Shock MM, Ant Crud, Mang Acet, Orn Umb, Kali Carb, Hydr 6X, 30X, 1M.

... If you pet has had nasty side effects- acute or chronic behaviour changes. eg seizures, disorientated, growling in pain when touched, lethargic, general pain and unwellness, fearful etc. Can use a general detox, but will not repair or prevent damages to the nervous system. **Options:** Dog Kennels and breeders, shelters can add a dose to meals or water bowl (filtered water).

SOME OF THE Dangers of HEAVY METALS IN VACCINE.

Thimerosal (**mercury**) - an organic compound containing the heavy metal mercury, which has been widely used as a preservative in vaccines. Mercury is a powerful neurotoxin. It is one of the most potent poisons known to man and has been shown to impair the function of many internal systems, chief among them being the brain, the central nervous system, the endocrine system, and the kidneys, as well as other organs.

Aluminum - another heavy metal used in vaccines as an adjuvant. Adjuvants are often added to vaccines containing killed viruses in order to enhance, or boost the vaccine's effectiveness. Aluminum is a known neurotoxin.

Formaldehyde - classified by the EPA as a probable carcinogen, is used as a tissue fixative in some vaccines.

Metals, such as aluminium and mercury, affect the brain and the nerves causing seizures, dementia, hyperactivity in the young pets and brain disfunction (dementia) in the aged. All organs are susceptible, especially the gastro-intestinal tract, kidneys, liver and the bone marrow. Toxicity may not be apparent for many years until debilitating nerve disorders become apparent, at which stage , it may be too late.
