

PRODUCT CODE AN201	Rodent Ulcers	5 Pages
Known as a <u>autoimmune disorder of pathogenesis.</u>		
For all species and ages		
Last Updated: 13-06-18		

It can take up to a number of months to repair and heal immune system, so persist. Please note: if not treating mouth ulcers (rodent) then request that you are only needing Formulas 1, 2, and 4 (not Slippery Elm powder)

Indolent ulcers are considered to be part of a larger disease group called "eosinophilic granuloma" complex. The term "**eosinophilic granuloma complex**" **refers to (3) three types of lesions** that look quite different but are actually very similar from a physiological point of view:

This term refers to a group of skin diseases of cats that includes not only the rodent ulcers but also lesions called -

~ **Eosinophilic plaques** (*usually found on the abdomen and thighs typically affect the skin of the **abdomen, inner thigh, throat, or around the anus.** The areas are raised, pink or red, and appear "raw".*)

~ **Eosinophilic granulomas (linear lesions on the caudal thighs, face, tongue and palate, and including swollen lower lips and chin)**. These are inflammatory lesions that often affect the same cat and all respond to the same type of therapy and may have the same underlying cause. They occur when the cat's immune system misdirects its activities and attacks the cat's mouth.

Eosinophilic granulomas are also known as eosinophilic granuloma complex. Although the mouth is the most common site for the development of eosinophilic granulomas, they sometimes occur in other locations. An eosinophil is a type of white blood cell. Regardless of which underlying cause is correct, inflammation occurs in response to parasites or microorganisms or antigen-antibody complexes. When there are irritated tissues or allergic reactions in the body with inflammation produced, eosinophils respond to this inflammation, move in and the eosinophilic granulomas are created.

~ **Indolent ulcers (also called Rodent ulcers)** *affect a cat's **upper lip and sometimes the tongue.*** These lesions usually look like pink, eroded sores. Eosinophilic granulomas usually occur as ulcers, sores, blisters on the lips of the mouth. The central or rear portions of the upper lip are most frequently affected. The sores may be covered with scabs, or they bleed or emit an unpleasant odor. Rarely, sores may develop elsewhere on the body. Inflammation (pain) is not an infection but is a process in which the body's white blood cells protect against bacterial and viral infections.

Hyper eosinophilic syndrome and **eosinophilic granuloma complex** involve the over-proliferation of eosinophils - however, the hyper eosinophilic syndrome is the more serious of the two, because the eosinophils infiltrate vital organs and cause multiple issues.

This condition won't go away unless the immune system is restored.

Using minerals and vitamins – vitamin c, and zinc for example. As the ulcer is secondary to the immune disorder. We have to correct both. To do this may take months, with the use of the herbal formula we provide. However, as long as a kitty can eat okay whilst correcting the immune system that is the most important thing. Experienced health practitioners believe this condition can be set off after a vaccination injection, especially from causing severe depletion vitamin C.

Symptoms

The syndrome is painful.

Severe eosinophilic granulomas can become infected or can be disfiguring.

Signs of pain:

may occur in cats that suffer from eosinophilic granulomas. Hiding, aggression, and other behavior changes may occur. Cats with eosinophilic granulomas may exhibit decreased appetite due to pain associated with eating. If swelling on side of the face or under chin etc, use in conjunction with the **HAMPL Drawing Out 16 30ml formula.**

Other Auto-Immune Disorders

As the ulcer is secondary to the immune disorder. We have to correct both. As long as the kitty can eat okay whilst correcting the immune system that is fine.

~ **Stomatitis (inflamed gums, tongue or-and ulcers)**

Other cases are associated with an immune deficiency disease which often acquires mouth ulcers or inflamed tongue or mouth is such as feline immunodeficiency virus, feline leukemia, feline viral respiratory disease complex, or kidney failure.

~ **Gingivitis.** The term gingivostomatitis refers to inflammation of the gingiva (i.e.gingivitis) and the mouth generally.

Examples of medical terminology which utilize this term include:

~ **Herpetic gingivostomatitis** - is inflammation of the mouth caused by herpes simplex virus. Sometimes the term gingivostomatitis is used as a synonym for gingivostomatitis caused specifically by herpes simplex infection. The exact cause of stomatitis is unknown. The role of bacteria, viruses, genetics, nutrition, environment, and domestication, in general, have all been considered. Recent evidence supports the role of calicivirus in the development of stomatitis. Whatever the trigger, it is generally believed that cats with stomatitis have an altered immune state. Initially, an over-reaction to plaque bacteria occurs; instead of typical gingivitis, these cats experience a disproportionate ramped-up reaction. Without intervention, some of these cats progress from this hyper-immune state to a more severe auto-immune disease. In this condition, the body's immune system actually redirects and inappropriately attacks the cat's dental tissues themselves.

~ **Rodent Ulcers (Indolent ulcers)** can take the time to go away, as it is an autoimmune disorder. So if you can manage to continue the herbs and Vitamin c etc this will over time correct the body attacking the good cells in the body and balance the immune system.

Holistic Animal Remedies

Vitamin C supplement

Vitamin c is needed to resolve stomatitis (gum inflammation), rodent ulcers in cats and kittens. Its very painful and cannot eat solid foods because of the pain it causes. **We see these appear after vaccinations have been given. Vaccinations severely deplete a cat of Vitamin C. Therefore we need to repair the body with Vitamin C. Vitamin C** is an anti-inflammatory that helps reduce and prevent inflammation and swelling. Research has shown that high doses of vitamin C given orally or in meals has been shown to reduce the production of pro-inflammatory cytokines. We have had great improvement seen when vitamin C is restored back into the body. **Skin Conditions, weakness in joints and spine which cause "Inflammation" and "pain in joints", spine area can be often associated with a vitamin or mineral deficiencies. Thus continued vaccinations that severely deplete vitamin c and magnesium (stress), will make your dog more susceptible to injuries and tears.** Research has shown that high doses of vitamin C given orally or in meals has been shown to reduce the production of pro-inflammatory cytokines. We have had great improvement seen when vitamin C is restored back into the body.

Conventional Treatments. Steroids (Cortisone), used since 1949, is often a drug that doctors prescribe when the doctor wants to kill the body's immune response, or the doctor does not know of any treatment options. However if we explore the options of alternative medicines, we find we can assist the immune system using herbal formulas that are immune modulators. Steroids as a medicine, reduce inflammation and suppress the immune system. Steroids also reduce the activity of the immune system by blocking the white blood cells from working properly. Because your immune system is suppressed, your infections become worse (fungal, psoriasis, viral). **Avoid vaccination injections that will further compromise the immune system, when needed the alternative to injections is the homeopathic oral nosode immunizations.**

Add to diet and will help protect from sickness (as vaccines severely deplete vitamin C) e.g **a whole food type of "Vitamin C" powder** (a good one is "Organic high potency Vitamin C" by TraditionalFoods.org (1/4 teaspoon = 1,000mg). **This type of natural vitamin c is good if it's continued long-term just for good health.**

DOSAGE: Organic Natural Vitamin C powder: Feline or kitten: Add approx. 1/4 teaspoon in meals or/and milk drinks twice daily. **OR** If you can't quite afford the natural form - get the "Synthetic" Vitamin C crystals (white powder) * *only use this short-term as its synthetic* .. a couple of weeks to a month.

Synthetic Vitamin C SODIUM ASCORBATE POWDER

Feline or kitten: Add approx. 1 teaspoon in meals and milk drinks twice to three times daily or *dilute in a little liquid an oral syringe.*

Holistic Animal Remedies

2. Detox your pet or horse with:

- ~ HAMPL VaccDetox 30ml drops
- ~ Activated Charcoal powder.

This powder can detox over 4,000 toxins a day.

Research studies have shown that activated charcoal decreases the toxic load on the body by over 60% with daily use. This is due to its ability to bind and grab up chlorine, pesticides and herbicides, bacteria, viruses, yeast, parasites, toxic chemicals and endotoxic metabolites. The American Journal of Gastroenterology published a study reporting a scientific claim that activated charcoal can reduce the build-up of **nitrogen waste** in the body; e.g...UREA levels (toxic waste) from kidneys. Research studies have also shown that **activated charcoal decreases the toxic load on the body by over 60% with daily use.** This is due to its ability to bind and grab up chlorine, pesticides and herbicides, bacteria, viruses, yeast, parasites, toxic chemicals and endotoxic metabolites.

Endotoxins: These are substances that are produced within our body. This would include toxins produced by our gut bacteria, molecules formed by incomplete liver conjugation and ammonia which can arise due to inadequate kidney filtration.

Kidney Cleansing - (all cats need this) The kidneys are critical to filtering and removing toxins through the urinary system. Additionally, it takes urea out of the body and when it is functioning poorly it can lead to elevated ammonia, which is extremely toxic to the brain. Poorly functioning kidneys are also major contributors to blood pressure problems and cardiovascular disease. It also absorbs toxins in the kidneys and livers preventing a toxic overload, and at the same time allowing the vital organs (.. liver and kidneys) in the body to function normally. It also can help to eliminate the toxins in the body because it stimulates the bile flow.

SUGGESTION

FELINE: Add 5 drops of the RenoAid 19-1 formula, and ParaExpel 48 drops, DawingOut 16 drops etc.. and 1 teaspoon into a cup of filtered water in a jar with lid, shake before each use. Pour 1-2 tablespoons in meals or/and milk drink. (or build up to a tablespoon each meal or just add once a day to meals). **MULTIPLE PETS** (cats and dogs), add 2 capsules or 1 teaspoon the powder into a jar with a screw lid (one or 2 cups of filtered water) and can add the homeopathic remedies e.g **DrawingOut 16 drops** if teeth or skin issues. Shake before adding to each meal or/milk drinks. pour about a tablespoon or so of the liquid each time. **TWICE a day for one month** to help detox from the heavy metals from the vaccines. After a month, one can continue adding activated charcoal to meals daily for optimum health. * You should be able to order online or buy from a health food store the capsules or powder.

3. We highly recommending purchasing and using the below supplements to restore and strengthen your kitten or cat's **"gut flora defense system"**

Probiotics Powder

a good quality one is - "**ProBiotic 12 Powder**" * **200 Billion CFU's** (brand - Seeking Health) This probiotic can be purchased from Seeking Health website or other websites also sell this. * Add and mix ¼ teaspoon of the powder into pets meals or some plain yogurt and offer or oral syringe. **** It takes 2 months to fully restore gut flora ****

Note: whether your pet has an infection or not (parasite, bacteria or fungal) or past or present Antibiotic drugs use, your pet needs this foundation of healing in the gut.

and

Colostrum powder

~ **Colostrumhealth 100% pure Colostrum Powder**

<http://www.colostrum.gen.nz/> **Order online.**

* Add 1/2 or more teaspoons to milk drinks - stir well - do this for a min of 2 months.

For all ages, especially needed for semi ferals, ferals and all rescue cats and kittens.

“FELINE Oral Supplement Mix Guide”

THIS IS A VERY GOOD IMMUNE BOOSTING MIX

How to give herbal medicines to your pet

3. HAMPL Systemic Infection 201-3 50ml (1.7oz) liquid

(brown strong tasting liquid) Add suggested amount of drops (see bottle label for suggestion) with 1/2 teaspoon of **slippery elm powder** into a small cup (I use a egg cup) fill the cup with boiled water from kettle (as to dissolve alcohol content of the herb extract) stir well.

Then you can add the liquid supplements and powders as suggested below:

LIQUID VITAMINS

I use a **Magnesium supplement** in liquid form adding several drops (ReMag Magnesium Solution) along with several drops of the (ReLyte Mineral solution) which has **12 minerals in Liquid form.**

POWDER (caps) VITAMINS

If your feline friend is eating a natural diet of Raw meat diet, I would add a pinch of **Synergy greens powder** (alkaline). A pinch of Potassium Ascorbate (powder from capsule).

Using a oral syringe, give very small sips at the side of mouth, until 1ml it taken. Repeat twice a day. Or add the prepared mixture to meals.

ADD TO MEALS

Note: there are a number of different vitamin c, so the brand and type is important. One of the ones we recommend is called "**Organic high potency Vitamin C**" by **TraditionalFoods.org** (1/4 teaspoon = 1,000mg) * See Page 4.

Add a pinch of **Zinc picolinate powder from capsule.**

Zinc Picolinate 15mg capsules (Thorne Research brand)

Dosage: 25mg (a pinch of powder) Enhances immune function and aids healing. Please contact our practitioners, if ulcers are not healing, as it maybe due to incorrect diagnosis or other complications.

Also do the Detox ACTIVATED CHARCOAL POWDER *See Page 5
