A natural formula that works on boosting the immune system as well as a herbal topical antibiotic cream to apply to wound.

**Also refer to Page 2-4 Ttouch on your pet.**

(Working on the nervous system. Changing habitual habits)

**HAMPL Herbal Heal Cream 60ml Jar TOPICAL APPLICATION**

\* Fine pet licks the cream.

**Contains "Topical" Healing Cream blend of:** Vitamin E, Hypericum, Calendula, Aloe Vera, Goldenseal.

A natural Topical Cream formula that works on quickly closing and repairing all skin wounds and skin infection, however if pus enclosed or lump, you will first need to get this out by using the **"HAMPL Drawing Out 16 formula 30ml"**.

If scar tissue is an issue, add the oil from a Vitamin E capsules twice daily in meals.

**Suggestion to APPLY TO all the AFFECTED areas. Twice or more daily.**

**Note:** Before using this cream, make sure wound is not got pus under the skin which sometimes the case if old injury. To quickly release pus and all infections use the **Drawing Out** formula first. Before closing sore/wound with this herbal fast heal topical cream. 100%

Safe for Pets to licks the cream.

Also once healed open wound or infection, can then apply aloe vera gel (split leaf on plant) and apply the gel to help dry wound up. Repeat often as needed daily.

If the wound also has a musky smell or feet area, dilute a teaspoon of **apple cider vinegar** with ¼ cup of water and spray or dunk food in mixture. Repeat on any areas of skin that looks a bit funky and smelly. Add a tablespoon to drinking water as well. This will get rid of any fungal or acidic skin issues.

**NUTRITION DIET**

To a home prepared raw meat and veg diet, add Essential Fatty Acid oils supplement daily plus ½ teaspoon of Vita min C powder (crush tablet) 1 teaspoon of Colostrums powder, chelated Zinc 50gm 1 tablet (crushed) which will boost the immune system dramatically. Do this for a min of 6 months. Refer to Canine diet sheet for optimum healing and health.

**Do not feed Beef, corn, wheat, rice or pasta as these can cause red skin allergy reactions when a dog's immune system is weak.**

**Lick granuloma which is also known as canine acral lick dermatitis (ACL) is a skin injury resulting from excessive licking.**

When a dog persistently licks its skin, it results in inflammation. With time, the skin thickens and due to the continuous licking, the area cannot heal. It results in a lick-inflammation vicious cycle.

As a result, some secondary infections may occur. These include ruptured hair follicles, ruptured apocrine glands, and bacterial infections. These make the itch more severe and also perpetuate the lick cycle.

Allergies are the main cause for excessive licking, especially around toes and feet.

If you have not changed diets to a home prepared diet, you will be able to be given guidance to what may cause allergy reactions with our diet sheet and information that is also supplied with all orders.

If licking our injuries, there may be an underlying infection, if this is the case, also use the "**HAMPL Draw Out 16 formula for infection formula**". (aka - Drawing Out formula)

If the licking is around a joint area and the dog is a little lame or has arthritis, then there maybe a **nerve sciatica pain**.

**Often a dog with chew at, licking is a way of trying to relieve the discomfort.**

If you feel this is the case also try the homeopathic treatment **HAMPL Sciatica formula** and **HAMPL Arthritis formula** to see if this is also wanting the needed.

**Acral Lick Granulomas are often allergy reactions.** i.e. To chemicals & preservatives in dry and wet commercial foods, if feeding a natural diet, then see out diet sheet for natural food allergy reactions as well. Also reactions to routine drugs, vaccine toxins, flea, wormer and heartworm chemical products.

Use alternative natural medicines & products & skin washes. **A 100% Natural diet is also very important.**

**Body work called "T-touch" Therapy for ALL Animals**

**I have found the Ttouch has been so invaluable. It is easy to do for your pets or farm animal at home or property.**

**PLEASE READ.** Linda Tellington-Jones, developed a technique that works wonderfully for modifying negative behaviours, taming wild or unsocialized animals gently, increasing trust and reducing aggressiveness, and for accelerated healing. The

technique is named by its inventor the Tellington TTouch. It is derived from the human technique of Feldenkrais.

This is a method that opens new neurological pathways to the brain by us of nonhabitual movements. The concept is based on the life-force intelligence of each cell of the body, each cell's connection with whole organism animal or human, and between. "At a cellular level", says Linda Tellington-Jones, "we're all the same". The TTouch stimulates cell intelligence, and "so turns on the corresponding brain cells like so many light bulbs."

Use of the Ttouch to stimulate the body cells and corresponding brain cells activates the brain and changes old habits and patterns. By asking and allowing the animal to think, and by an attitude of conscious respect and cooperation with her, the cellular intelligence becomes two-way communication. The result is behaviour and personality changes, along with increased speed of healing for wounds, injuries or stiffness.

**The following Ttouches are single clockwise circles with the thumb anchored and the fingers resting on the animal start at 6 o'clock ( the bottom of the circle ) and push the skin around in a circle and a quarter then pause and release.**

The hand and arm should remain soft. Be aware of your breathing.

The Ttouch moves the skin rather than rubbing as a massage would . The intention is to activate neural pathways to the brain & to improve the function of the cells. When you affect the nervous system it also affects the muscle. With light ...firm ...slow...steady pressures the idea is to affect the **nervous system and cells** not the muscles.

When the touch is done properly (circles closed) it generates all four brain - wave patterns in the animals receiving it, alpha, beta, theta, and delta. e.g. Normal daily activity uses the beta pattern, alpha is equivalent to human concentration or meditation, theta is deep trance, and delta is the Level below consciousness usually associated with sleep Using the touch to stimulate the body cells and corresponding brain cells activates the brain and change old habits and patterns. **Example** It enables the animal to think through rather than automatically reacting by instinct. Instead of the habitual fight or freeze, fooling around or flight response, the animal evaluates the situation - and calms down.

### **Physical Injuries, paralysis or Degeneration:**

Refer to: Raccoon Touch next page.

It even helps repair and reconnect nerve cells and and strengthen bone injuries, works on the spine and brain connection, if neurological damages or degenerations and paralysis weakness and atrophy.

**The faster beginning circles awaken** the animal's body.

**The slower** allow deep relaxation, release muscle tension, deepen and enhance respiration, aid physical and emotional healing.

Ttouch techniques that work on the cellular memory of the animal.

**Lying Leopard** - instead of the fingers being curved they are lying flat and spreads over a larger area - less invasive touches all over the body )

- Comforting to some animals. \* Calming for thunderstorms as well applying the **Clouded Leopard** as well if this stroke is less effective.

**Raccoon Touch** - Tips of fingers (very light pressure) start six of clock position and finish off at 8 O' Clock. (small light touching circles) Remember to breath, slow deep breaths.

- Especially good for Injury, surgery, arthritis, bruising.

Eg **Spine degeneration or injuries, wobblers, paralysis** etc

- Just apply around injury or soreness, lightly.
- Animals that chew everything  
(apply touches gently and lightly around the mouth and gums)
- Fearful animals that bite or growl.

**Lick of the cow's Tongue** -Spread fingers apart, with long diagonal strokes across the lay of the hair.

Down the shoulders, legs -

- Connecting the Back/behind to the front,
- For animals who are sore or fearful of being touched behind areas.

**Python Lift** - This lift can be used on the shoulders, forearm, girth area, neck and hind legs.

The whole hand is placed on the body or around the leg with enough pressure to gently lift the skin and support the muscle. The lift is only 1/2 " to 1". Hold for about 4 seconds and then SLOWLY return the skin to the starting position and then release.-- If you lift too much up the animal will hold its breath which we don't want.

- Use on the arthritis leg a little below the joint of were the **arthritis**.
- Start top and work down.

**The Clouded Leopard** - Using the pads of the fingers lightly curved, do circles keep all three knuckles joints soft and moving as you make each circle.

- For anxiety, pain, and all fearful animals
- Calming at times of thunderstorms Massage tail Joint - for fear biters, animal who are scared of loud noises,

Example: **thunder, gun shots, fireworks etc.**

**Massage Ears** - (gently) for animal in shock (e.g. car accidents on the way to hospital.) car sickness, digestive problems, to relax a cat or dog. ( Massage puppies who are teething with small tiny circles around mouth and work gums regularly). Feral kitties or nervous kitties and cats, really helps calm them with gentle ear work slowly rotating the base of the ear for 5 minutes.

**Belly Lifts** -Animals with bloating, intestinal disorders, hip dysplasia, sore back (hold 10 sec to 1 min then slowly release)

You can apply the touches everyday or only a couple of times a week is fine no more than 5 minutes required (max, of 5 minutes ONLY if animal is ill e.g. after surgery or very stressed) - Use touches only after observing what your animals needs at the time, watch for changes and new responses, then work can be stopped on the animal, or you may need to work on another problem! **You will notice, your pet will give a sigh or yawn in relief during or after a session. Horses and cattle will go to the toilet as well.** Physically injured or impaired animals will start to relax and sleep differently. And changes are seen that day and continual improvement each day as you do some work on them during the week/s
