

PRODUCT CODE AN211 Fungal Infection - Cryptococcosis Set of 2	7 Pages
For all species and ages.	Related Products :
Last Updated: 13.04.18	

Cryptococcosis is the most common fungal disease in dogs and should be an important differential diagnosis when an animal presents with sneezing and nasal discharge that is unresponsive to antibiotics.

Fungal infection is one of the biggest misdiagnosed or overlooked condition in animals. The four primary systems affected are the respiratory, central nervous, ocular, and cutaneous systems. Dogs are not infected by *C. neoformans* nearly as often as their feline counterparts. The prevalence in dogs is .00013%, as compared to cats that are 7-10 times more likely to be infected. The average age of infected dogs is 3.5 years and, unlike cats, there is no gender predisposition. Overrepresented dog breeds include American Cocker Spaniels and Labrador Retrievers in North America, and Doberman Pinschers and Great Danes in Australia. Cryptococcosis affects the same four organ systems as with cats, but the CNS and eyes are more commonly involved in dogs than in cats. The clinical signs are similar to those found in cats except that fever (103-105 F) is seen more often in affected dogs (25% of cases).

Symptoms and Diagnosis

Symptoms of cryptococcus vary depending on the organ systems affected by the fungus. Often, symptoms are systemic and nonspecific, such as diminished appetite, weight loss, or lethargy. Other signs to watch for in your cat or dog are sniffing, sneezing, raspy breathing, or a runny nose. Sometimes infected animals can have hard lumpy swellings over the bridge of the nose, skin lesions on the top of the head, or swollen lymph nodes. If the fungus has invaded the central nervous system, there can be head tilting, nystagmus (a strange, abnormal back and forth eye movement), the inability to blink due to paralysis of the facial nerves, or loss of coordination, including circling and seizures.

Eye problems are also very common and can include hemorrhage in the retina, as well as inflammatory conditions of the eye like chorioretinitis and anterior uveitis. Diagnosis of a cryptococcal infection can be done quickly and easily through examination of either discharge from the kitty's nose or skin lesions. The fungus is usually very easy to spot under a microscope and is easily cultured in the laboratory.

HAMPL remedies prove very effective as an anti - fungal solution and if needed we also support a retina remedy for repair eye damages if no too far damaged without any side affects of the general conventional methods that normally are given. E.G (Product 185) Uveitis remedies (*Intraocular Inflammation – inflammation of the uvea of the eye*) combined with the *Glaucoma remedy*)

The infection is caught from a cat's environment, and along with uveitis it is not limited to affecting the eye. The problems associated with this infection are:

- peripheral blindness
- detached retinas
- inflamed retinas
- nasal discharge
- skin lesions
- behavioral changes

Fungal - Yeast Infections in general

Importance of restoring and maintaining beneficial bacteria, the so-called "friendly flora" in the intestines. These bacteria are killed off by chlorine in your water supply, by Veterinary or Doctor's anti-biotics, by preservatives in food and by alcohol, and by other factors. When the beneficial bacteria are gone, "bad" bacteria, molds, and yeasts (also known as Candida) can then rage out-of-control.

Immune system overload, malnutrition, skin and ear problems, and many other problems shortly follow this.

Afflicted by candidiasis, the hidden curse. Candidiasis, an overgrowth of yeast (Candida) in the body, can be a key contributing factor in causing or worsening:

- * Food allergies
- * Digestive problems
- * Sensitivity to tobacco and odors
- * Other immune-related disorders, yeast infection in ear!
- * Headaches
- * Depression
- * Cancer
- * AIDS
- * Skin rashes
- * Joint and muscle pain
- * extreme fatigue (known as CFS in humans)

The key to overcoming many such conditions is to undo the actions which caused them to occur in the first place, while restoring balance to the body.

Avoiding..... all dairy (goats milk is fine), yeast products and foods, avoiding antibiotics (using alternative herbal infection fighters if needing antibiotics)

The gastrointestinal tract's balance of beneficial flora is most commonly disrupted by:

- * Antibiotic usage
- * Excessive sugar consumption
- * Stress
- * Drinking chlorinated water
- * A diet consisting chiefly of processed tin foods
- * Prescription anti-inflammatory drugs and painkillers
- * A diet high in red meats or rich, fatty foods.

Many people and animals lack sufficient friendly bacteria in their digestive tracts, and are often overrun with unfriendly bacteria and yeasts at the same time.

These people/animals are in fact being simultaneously poisoned and starved (malnourished).

The effects of the imbalance of intestinal flora are all too often seen in the failing health and vitality of millions of middle-aged and elderly individuals.

However, if you have had antibiotics, a high stress level, have been exposed to chlorinated water, or have any of the signs or symptoms of ill health below, you may have a bacterial imbalance beyond the ability of such foods to resolve.

If you or pet have:

- * Chronic fatigue
- * Frequent diarrhea
- * Frequent intestinal gas
- * Frequent constipation
- * Poor immune response
- * Chronic bladder infections
- * Chronic vaginal infections
- * Allergies
- * Skin conditions (e.g skin odour (fungal), red, itchy, dry, scaly, sores, loss of fur due to excessive scratching.
- * Rapid onset of osteoporosis
- * Vitamin B deficiencies
- * Dairy product sensitivities
- * Chronic bad breath

Then this how to rid this YEAST infection that is also internally “systemic fungal immune weakness” The fungal yeast is in your tummy to stay for decades ... Once you get too much yeast it will not leave on its own. Not in a year, not in ten years, not in your lifetime. And as long as it is there, it's going to win sooner or later. So here is what you can do for an animal who has had or still has skin allergies, ear infections, smelly odour or ever had antibiotics. (or for yourself)

Here is the powder I like to use for myself and my pet's.

New Life Colostrum Plus Immune Formula

Immune Formula combines the powerful immune supporting benefits of New Life Colostrum with Beta-lipid, olive leaf extract, Larch arabinoglactin, lactoferrin, and Beta 1,3 Glucan. This formula helps support the immune system.

- Helps provide the body with antibodies for several pathogens, including viruses, yeasts, and bacteria
- Helps inhibit binding of pathogens to stomach and intestinal lining
- Helps enhance the growth of beneficial gut microflora while stimulating natural killer cell cytotoxicity
- Stimulates a non-specific immune response, creating a powerful defense against viral, bacterial, fungal and parasitic invaders

Deprives pathogens of the iron they need to survive **Website**

Fungal Infection (i.e. mold exposure, damp areas etc)

Use **Neem powder (Organic India Neem Capsules - leaves, flowers – from iherb.com) * add 1/4 powder from the capsule** in meals three times a week with a pinch of “**Activated Charcoal**” as well. Continue for a month. If it's too strong do only once a week or every second week (.. causing lethargy) *Activated Charcoal” can pull out 4,000 toxins a day.

Mold (fungal) infections .. **can be caused from exposure to moldy damp enclosures or rooms ...** can cause sickness - which includes memory loss, headaches, nosebleeds, nausea, diarrhea, bronchitis, sinus infection, asthma type trouble breathing. **Note:** Neem herb also helps detox heavy metals (vaccine toxins), and is also a parasitic (wormer).

STEAM Therapy (if sinus or lung congestion)

Put your pet in the shower room on a mat, towel or your cozy dressing gown, several times a day when having showers and run hot water in the shower for 5-10 minutes each time. Don't let them get wet at all.

HERBAL DOSING INSTRUCTIONS

FELINES (and other small species)

Cat, birds, and other small species; approx. 40 drops in a cup then pour ½ cup of boiled hot water from kettle. Add a quarter teaspoon of slipper elm powder, stir well. Allow to cool then ready to use. You can add magnesium and mineral drops and Liposomal Vitamin c as well (2 satchels or 2 teaspoons). Then ready to oral syringe or add 5 ml to meals.

Birds- drop onto beak twice to three times a day. (Just use the herb diluted mix)

CANINES

Small dog; koalas other species. approx 40 drops.

Med dog: approx. 60 drops

Med – large dog: approx. 80 drops

For Canines – can add to some unsweetened apple sauce or mix with some mashed up sardines and hand feed it (tins of plain sardines in spring water from supermarket). The idea of adding something to the herbs is to hide the strong taste of the herbs.

HOW OFTEN

Repeat oral dose - twice to four times a day. Depending of severity of infection. Reduce frequency upon improvement and use for a week or less long then stop. Repeat anytime.

Can dilute herbs and apply topically on affected area as well (on nose and face). Repeat twice a day.

Severe Infection treatment dosing guide

TREATING ACUTE "SYSTEMIC" FUNGAL INFECTIONS

If your pet is vomiting or unable to hold solids foods, we suggest this method in liquid dilution oral dosing so it goes into the blood stream straight way and not going through and processed in the stomach.

REPEAT ORAL DOSING: repeat every 1/2 hour Repeating for 4 treatments.

Do this short dosing sessions twice to three times a day for the first day. Following day you should be seeing improvement. If so reduce to repeat dosing hourly. 4 x daily dosing. Continue until improvement again, then reduce to 2 – 3 x daily for longer until all health has been restore. Then upon further improvement, you could then add the herbal dose in some sardines (tin of plain sardines in spring water) and hand feed the piece with herb dose in it – repeat three to four times a day for as long as needed and infection is clear. **NOTE:** Results should be seen within 24 hours, if not add more herbs to the liquid dilution.

If too strong tasting for your pet, add more liquid to dilute a bit more.

Or try adding some water with some well mashed sardines. So its still almost liquid dosing.

Chronic Infection dosing

TREATING CHRONIC "SYSTEMIC" FUNGAL INFECTIONS.

Can add drops to meals or sardines and hand feed – three times a day for 2 months – for dogs.

In conjunction with: Along with Probiotics and Colostrum, Vitamin C etc added to herbal dosing mix.

AVOID - Antibiotic drugs and other toxic drugs, sprays and products.

Naturopathic Nutritional Advice

Boost the immune system to heal. The majority of inflammatory diseases start in your gut.

2. BEST PROBIOTICS

" ProBiotic 12 Powder" * 200 Billion CFU's (brand - Seeking Health)
from Seeking Health website or other website also sell this.

OR "RAW Probiotics Ultimate Care" Capsules *100 Billion CFU's (Band- Garden of Life)

The above from Garden of Life can be purchase at www.iherb.com

*** It takes 2 months to fully restore gut flora.** If your pet has a health issue, whether or not previously had Antibiotic Drugs treatments, the their defense system is defiantly down and damaged.

3. BEST COLOSTRUM

NZ Colostrum Powder

Colostrumhealth 100% pure Colostrum Powder

E.mail sales@colostrum.gen.nz

<http://www.colostrum.gen.nz/> Order on-line.

Feline - Toy dog: Add a pinch of powder or each into every meal given.

Double the amount for larger pets.

OR **New Life Colostrum Plus Immune Formula Website**
