# NATUROPATHY for your Pet

## **HOMEOPATHIC Medicines (clear liquid)**

How to apply "a dose" : put drops to back of shoulder blades.

**Birds:** drip a few drops on back in between wings (not need to pat drops in).

**Pets with fur,** pat in a couple of drops with bottom of bottle, then apply a couple more drops on same spot so it reaches the skin.

"Alternating weekly" between

**& HAMPL CF-1 formula 200C 50ml  
HAMPL CF-2 formula 200C 50ml**

### **Frequency of Dosing:**

Start remedy CF-1 first. Repeat (4-6) four times daily. Following week go onto CF-2 formula and so on.

Start all other herbs and remedies now as well. And a natural diet.

1. **CANCER FORMULA CF -1 200C 50ml drops**

Providing HOMEOPATHICS FOR "SPECIFIC TYPE OF CANCER" different pathogens / symptoms caused from growth.

Alternating each week with CF -2 below

2. **CANCER FORMULA CF-2 200C 50ml drops**

Providing HOMEOPATHIC ORGAN "CANCER NOSODE MEDICINE "

If you have also received other homeopathic medicines, start these now as well. Please read the label for dosing frequencies, or use when needed.

NOTE: We have higher potencies of the **CF-1 an CF-2** which next strength is **1M** and then **10M**. So when re ordering please let us know it will be the next strength.

### **Omit all toxic chemical products, drugs, sprays, injections – use alternative safe medicines.**

ALL poisons - chemical products - drugs. i.e. vaccines, heartworm, wormers, flea products, antibiotics, tick treatments, arthritic drugs, steroids, cortisones, vaccinations etc. *Use alternative safe products e.g homeopathic and herbal formulas. If you allow a vet or vets still insist on vaccinations when your pet is sick, this would be like pouring petrol (gasoline) on fire. Avoiding any type of drugs or chemical products—toxic to body, use safe natural alternative medicines. Avoid all artificial chemical foods. (all high in carbs – sugars 57% and carcinogenic chemicals)*

Natural Pet Pharmacy

*Caring for Your Pet the Natural Way*

## **HERBAL Medicines (brown liquid)**

### **HAMPL Systemic Detox 50ml (or 100ml)**

\* "HERBS medicine extract liquid (*it comes in a Brown liquid (strong flavor, and smell)*)

Cannot go on the body, must be diluted and added to some food or water with a pinch of greens powder and vitamins, Liposomal Vit C gel or other tasty liquid.

#### **The herbal label may suggest:**

**Small animal, Cat :** Add 20 drops into 30ml—to burn off alcohol content—place 20ml of simmering (not boiling) water, let cool. Then oral syringe side of mouth small sips at a time until 1ml is taken.

Or mix it well into meals AFTER diluting in hot water.

**Birds:** put 2 drops in bird food of some sort, making sure they eat it first before offering more food. Or add 0.5ml of diluted herbs in meals and oral syringe it. Do this every time they eat a meal.

#### **Twice daily.**

This will make up enough to do quite a few repeat dosing. Add some supplements like greens powder and any other suggested vitamins. Stir well then oral syringe into the side of mouth 1ml as one dose. (Small sips at a time) Or mix 2 -3 well into every meal given.

**\* If by any chance you have a cat who is sensitive to herbs (you will see foaming or drooling from mouth-mucous membrane sensitivity), if this happens, then dilute in some food and offer.**

## **TREATMENT DURATION**

Continue till finished, then go onto the "Herbal Cancer Mix" 50ml.

This will then be used in conjunction with the other homeopathic treatments as normal.

**Small Dog:** 20 - 30 drops **Med-Large Dog or Animal:** 40 - 50 drops.

**Equine:** 10 drops to apple juice and oral syringe. \* due to a horse's unique metabolism they do not need to take a lot of herbs to get the desired effect.

**Diluting Dosing Options for canines:** dilute into some (unsweetened apple sauce) and oral syringe a dose side of mouth. Small sips at a time.

\*Can add other supplements (crushed vitamins-alkaline greens etc) to same oral dosing. Repeat—twice to three times a day finish bottle and re-order if needed. For Cancer patients a min of 6 months herbal treatment is important.

**Or Refer to - bottle Label of suggested amount of drops to give per size of your pet.** You can add the Liposomal Vitamin C gel (Refer to page 22 for Vitamin C dosing)

You have time to make decisions... don't rush into any treatment... many times you can't reverse the side effects from the treatments or surgeries you choose & also that cancer cannot be "Cut" out of you or your pet.

**It is a systemic disease and you have to get to the root of why you got it in order to get rid of it.**

### **Virus + Toxins = Cancer**

Ninety-eight percent of the time, cancer is caused by a virus and at least one type of toxin. There are many viruses that can be involved with cancer; the Epstein-Barr virus (EBV) is one of them. Ever heard of mononucleosis, also called glandular fever or "the kissing disease"? That's an early stage of EBV, and it's rampant, though the symptoms are often so mild that they aren't diagnosed as mono. In a later stage, years after any mono symptoms have disappeared, and in combination with toxins, EBV is the virus responsible for thyroid cancer. (EBV is also responsible for breast cancer, liver cancer, almost all lung cancer, pancreatic cancer, colon cancer, prostate cancer, women's reproductive cancers, leukemia, and many more.)

### **Cancer is just a word for damaged cells.**

These toxic – damaged cells (called cancer) can cause "cachexia" when already on chemo or other chemical treatments. Definition: syndrome of progressive weight loss, anorexia, and persistent erosion of host body cell mass in response to a malignant growth.

Cancer and all degenerative conditions (as the ignorant medical profession calls "diseases") are really symptoms of acidosis. The more severe (the longer and more those acids accumulate in one's cells) the worse the symptoms and degeneration. In 1936, Hoxsey opened a clinic in Dallas, Texas which became one of the largest privately owned cancer centers in the world. Hoxsey's understanding of cancer was that it is a systemic disease created from metabolic imbalances that needed to be restored. Herbal medicines help create homeostasis (internal stability), kill cancer cells, and remove the toxins created by killing cancer cells.

### **Most disease is what we call having an auto immune disorder**

We believe 100% of these systemic disorders are caused by exposure to toxins and chemicals in the environment. **We live in a toxic environment, a chemical soup** .. the air we breathe, the water we drink, the food we eat, the house we all live in. Most pets and humans can handle it, some, if not all of it. Some individuals cannot handle any of it and it affects their genetic structure. They have a weak chromosome, a weak genetic structure. All it takes for these type of people and pets is one small amount of chemicals to alter and shift the replication of cell structures within the body and you have a much much higher susceptibility to disease. As a result, allopathic practitioners are not familiar or choose not to be aware of the impact of the chemical abundance that surrounds each individual - pet and humans. Some pets and humans are genetically impacted by chemicals of the body. The medical community like to just treat the problem, so it goes after the specific cancer cells with all kinds of complex and sometimes barbaric methods. When acids burn away at the cells they can burn away and spread. But the real problem is simply a toxic lymph system with a compromised immune system. We have seen that the best way to move the toxic cells (cancer) from the body is to begin the cleansing of the body (system). The cellular structure begins to replicate from toxins and cancer develops.

**MMS solution** – has been proven to be so effective for so many pets and people as a detox of all pathogens and heavy metals.

But must go very slow and only small amounts while detoxing is allowed. Loose stools, sinus drainage, mild headaches, fatigue are all symptoms of pathogens dying off in your pets (or humans body). So stop if symptoms like this appear, then resume at a lower dose or less per week, for a few more weeks, then try and do more days, so symptoms are reduced.

We are fully dedicated to helping you and your pet.

We can work in conjunction with your Vet if you decide to also use chemotherapy drugs. However, both cancer and/or chemo treatment may lead to low blood counts. You can reverse this condition using vitamin K2 (K2 supplement e.g Jarrow formula brand) MK-7 capsules, and Cod liver oil. The herb Echinacea and minerals magnesium and potassium will help increase red blood cell levels.

The chemo can also cause residual bone marrow damage.... meaning that the bone marrow becomes a sponge - like substance and will not produce any more blood cells ever. This causes pain all day long. You can fix this within weeks by feeding Bone Broth and Cannabis.

A success rate can be much higher when the pet has had no, or minimal, chemotherapy or surgery or radiation (radiation, if you asked the oncologist, will break up cancer cells, which can spread cancer as well), prior to commencing natural therapies. This is because toxins in chemotherapy have serious side effects, surgery is both invasive and traumatic, and the routine drugs associated with cancer treatment can have a seriously detrimental effect on the animal's immune function.

We provide ongoing guidance through the our clinic's

**On-line "Animal Health Service" link – you can register** on the Natural Pet Pharmacy website. [www.naturalpetpharmacy.com](http://www.naturalpetpharmacy.com)

Please keep us updated weekly or fortnightly on your pet's current health status. To progress any hurdles, we can provide individualized remedies through a distant consultation using the SCIO biofeedback system, which may detect additional issues e.g. infection etc.

Please provide a fur sample of your pet, age and name of pet.

## CANINE MEALS

This is a reminder to all that feel diet and nutrition are not as important as people make them out to be when it comes to beating cancer NATURALLY.... Let's think about this for a bit... If "DIET" & "NUTRITION" are not that important then why is it that people been known to beat cancer with diet (e.g. lots of juicing) alone?

The cancer-fighting ketogenic diet "formula" is roughly 75% fat, 23% protein, and 2% carbs.

Dr D'Agostina notes that it is the underlying inflammation from these high carbohydrate diets that promotes cancer, but also other diseases such as diabetes, obesity and Alzheimer's.

### **Here is some of what the diet would include.**

1 cup of organic ground beef, fish or poultry, spiced with turmeric, salt substitute

Cook the protein in olive oil or coconut oil

1 cup of cottage cheese or ricotta cheese

Flax seed 1 teaspoon per 10lbs

Flax oil or fish oil- you want a dose equivalent to 1000mg of EFA/10lbs

**Meat is a Protein, and protein are acidic and mucus forming, this clogs the your pet's lymphatic system. As do dairy foods.**

**The lymphatic system helps clear and prevent cancer (toxic waste protein cells) from forming. Pain and Inflammation are an acidosis experience. The HAMPL System Detox herbal formula will also help with reducing acidosis in body.**

\* But please reduce meat intake and provide at least 80% of fruit and vegetables. Must be mulched for easy digestion (as dogs have a short digestive tract compared to humans).

~ Canines can be vegetarians, but a little meat three times a week is good.  
(so if possible reduce any meat intake, and DEFINITELY no tin foods or rolls or kibble-58% SUGAR and CARCINOGENIC CHEMICALS in commercial pets food)

## A Low Inflammation Keto Diet

The last century has produced a ton of research showing that people, as well as dogs and cats, will benefit from eating a low carbohydrate diet. This research is particularly notable as it regards people with cancer and cancer in dogs.

\* All Kibble food are VERY HIGH in Carbohydrates (57-59% sugar-carbs) MUST OMIT COMPLETELY.

It is well known that cancer cells feed preferentially on glucose as a source of energy, but malignant cancer cells do not have the ability to burn fat for energy. Also, protein must first be processed through the liver and converted into glucose, before cancer cells can use it as food. So quite obviously, when carbohydrates are reduced and/or eliminated from the diet, it becomes very hard for cancer cells to feed and thrive.

### **Here's Why a Ketogenic Diet Works for Health**

The idea is to force the body to burn protein and fats for energy instead of carbohydrates ( refined sugars ). The main point is to eliminate carbohydrates from your dog's diet, especially if you are working to overcome a dog health challenge of any kind, but mostly because a low inflammation diet as described here, will help to prevent health problems before they start.

This becomes of paramount importance when dealing with the ultimate inflammatory disease, cancer. Cancer cells need glucose to thrive. The theory being that if you eliminate the most available source of glucose from carbohydrates which convert to sugars, you will starve the cancer cells, while the rest of the body thrives on glucose created from fats and proteins. Makes sense to me!

### ***How to Implement Ketogenic Diet Foods for Dogs***

So a natural (MUST BE ORGANIC) diet for canines like this, provides...

- protein in the 25% range
- fat in the 25% range
- fruit in 50%

Most dogs have spent their entire lives eating a diet that provides both protein and fats at the lower end of these percentage ranges. So implementing a ketogenic diet works best when protein and fat percentages are changed and introduced slowly, so as not to overload the pancreas, gallbladder and other digestive processes.

Because cancer is considered an 'inflammatory' disease, but also for general health reasons and prevention, the choice of meats and how is usually restricted.

Cancer & chemo can cause your blood counts to lower ... This can make you feel horrible.. we all know this. These counts can sometimes be brought back up naturally.. well most of the time. And it can be as simple as FOOD to do this trick.

## Feline Diet

**~ Felines do need to eat organic fresh raw meat to stay healthy.**

NO KIBBLE.

If possible add a pinch of Spirulina powder, a few drops of ReMag Magnesium, and a few drops of ReMyte Minerals supplement.

Or add these to the herbal Systemic formula only after you have already diluted 10-20 drops of the herbs in hot water from kettle.

## IMPORTANT

Completely ALL avoid artificial foods (junk foods), and using chemical sprays, shampoos, worming, flea, household chemical sprays, lawn and garden chemical poisons. So important to OMIT all toxic chemicals for the health of your pet/s and your family. By doing this can mean prevention or healing from mutations of cancer cells toxic wastes.

## EAT ORGANIC food for yourselves and your pets.

Diet: Incorporate less meat, if already feeding a home prepared natural diet.

Two weeks of 50/50 ORGANIC Vegetable pulp or mashed & ORGANIC Meat Ratio with fruit meals separate.

Incorporate mono meals.

If feeding meat meals every day, start reducing them to eventually leading to a 3 x week raw meat meals if you can.

If not just alternate between ORGANIC fruit meals and veggie & meat meals.

We typically see dogs do better on 25-30% raw meat, 10% Bone, and the rest Veggies and Fruits.

Fruit meals and snacks separate to meat meals.

**Other:** ORGANIC Turmeric powder, Coconut oil, Dates, Raw Carrots, Dried Fruit, Nuts, Seeds, Squashes, Spinach, Kale, Lightly Steamed Broccoli etc. (no sultanas or raisins)

Pulverise all the veggies for optimal absorption. e.g if you have vegetable smoothies feed the leftover pulp to your dog and see the difference it makes in their coat, eyes and wellness.

**Fasting:** Liquid meals Fasting 24 hours once a week.

You can start with 12 hours and work your way up.

Following the 24 hour day fast, do a fruit day. You may add almond milk, organic maple syrup, coconut shreds, raw nuts and seeds in moderation to any fruit smoothies or fruit bowls to get them to eat it.

## HERBS FOR LYMPHATIC SYSTEM (i.e. Systemic Detox HERBAL formula)

Lymphatic formula has been scientifically found to destroy cancer cells and/or inhibit cancer cells from growing. to cleanse (detoxify) and strengthen the lymphatic tissues and nodes of the body, and also to enhance the immune system.

### **Some of the Lymphatic herbs are:**

Burdock Root  
Cleavers Herb  
Cleavers Root  
Red Root  
Fenugreek Seed

We must first of all have clean bodies beginning with our lymphatic system. If this system - along with our blood and bowels - is not clean, we cannot utilise these remedies as we should.

Dr Morse stresses that the lymphatic system must be cleansed first and foremost. By cleansing the body and taking alkaline anti-inflammatory foods we build up our immunity and we change our bodies from acidic to alkaline, but we must continue to keep them alkaline. Cancer cannot grow in an alkaline oxygenated environment.

## Herbs and homeopathic “Lymphatic Drainer and Detoxing”

After being on this healing protocol (one to two weeks) you will see the lymph nodes started to swell; this a normal positive reaction, and a sign it's working. The job of your lymph nodes is to get rid of toxins. My understanding of lymph nodes and the lymphatic system leads me to believe that the cancer cells are being drawn into the lymph nodes so that they may be broken down and expelled from the body. Hence swollen lymph nodes (even larger in a pet with already swollen glands – e.g Canine or Feline lymphosarcoma).

Don't panic: this is normal does not always mean there is infection, but check with your Vet. To help the process we have included some lymph drainage remedies, such as Burdock, Cleavers, Red Clover, Blue Violet to help your body, and also turmeric to reduce the inflammation.

### **Cut and paste this text to see the talk on:**

Artemisinin: A Cancer Smart Bomb by Len Saputo, MD Youtube

\* Note: Sweet Chinese wormwood (Sweet Annie) herb is called “**Artemisinin**”

## Healing

Swelling in lymph nodes - becomes more so when clearing lymphatic system.

The job of your lymph nodes is to get rid of toxins.

After being on this healing protocol (a week to two weeks) you will see the lymph nodes start to swell, and later other areas of lymph glands of your dog or cat depending on the type of cancer your pet has (e.g lymphosarcoma) this a normal positive reaction. This is a sign it's working.

## Infection and Fever

Many times an underlying infection is common.

If your pet is sleeping on a cold surface or seems hot, then chances are they may also need a natural antibiotic from time to time. If you would like to use an alternative immune formula eg a homeopathic or herbal one (can be used in conjunction with antibiotic drugs), options are:

Homeopathic antibiotic "[HAMPL Infection Clear drops \(AN070\)](#) that goes on the body.

or

A more potent antibiotic is the herbal formula that can be added into meals or diluted and oral syringed – [HAMPL Infection Fighter 71 50ml \(AN071\)](#).

Consider these if you don't want to use chemical antibiotics, or some people use both. Use this every half hour for 5 repeats, repeat for another 3 days at 3 x daily if all is well again. It's fine to continue at 5 x daily if required for a bit longer. You can temporarily stop the other herbal medicines whilst you treat infection anywhere in the body with the antibiotic herbs.

If chemical antibiotics are used, also provide a strong Probiotic like **RAW PROBIOTICS (garden of life)** 100billion CPU's (add powder from capsule) once a day for 2 months.

Other common issues that you or your vet may find are for your pet (especially felines) to have an underlying bladder chronic infection.

Here is where the (AN014) [HAMPL Cystitis Clear 14 formula drops](#) are needed (especially if you pet has been brought up on artificial diet).

For tooth and gum abscesses and infection see [AN290 HAMPL Smelly Mouth](#) with easy dosing on body, along with the helpful [HAMPL Draw Out 16 formula drops](#), are a good options.

## Hydration – if needed at anytime.

Your vet can help you with this – when your pet is not eating much, or licking at food, and has been lethargic for a number of days or longer it is important to ask your friendly Vet to provide fluids under the skin i.e. **Sub-Q fluids** (only take 5 minutes to do).

\*not the same as I.V fluids (which is given in the vein).

Many people learn to do this at home for their pet.

**Example:** warm plain saline solution for small pet or felines of approx. 80ml of warm to 38-40 Celsius (we use a simple digital infrared thermometer) of plain saline solution (Hartmanns or Ringers Lactate depending what country you live in) dribbled just under the skin, takes 5 minutes to each day. This will help your pet feel better and improve appetite. Please ask about us supplying or ask Vet.

**Makes them feel better as well.**

# Supplementations

## Naturopathic Suggestion

(below nutritional options – be drawn to ones you feel your pet needs right now)

1. **PROBIOTICS**  
Probiotic 12 Powder maximum support with 200+ Billion CFU's  
[www.seekinghealth.com](http://www.seekinghealth.com)  
Read more on gut and digestion **See Page 24.**
2. **APRICOT SEEDS** (kernels) you can buy powder or capsules  
(Suggested link to Biovea brand, but any brand will do)  
[http://biovea.net/au/product\\_detail.aspx?PID=6797&OS=244](http://biovea.net/au/product_detail.aspx?PID=6797&OS=244)  
add powder to meals, half recommend amount for human dosage suggestion.  
Or crush kernels add 30 to 40 per day in a juice or smoothie.
3. **The " Liposomal Vitamin C" See page 22.**  
Please order box's of 30 satchels from a on-line supplier e.g [iherb.com](http://iherb.com)  
LivOn Laboratories Box of 30 Satchels
4. Cancer Herbal treatment **HAMPL Systemic Detox 50ml liquid**  
followed by the **HAMPL Cancer Mix 50ml liquid**
5. **Bromelain Enzyme Capsules**  
Enzymes which contain Bromelain that breakdown the coating around the tumour.
  - A. Bromelain (Only Bromelain - Nothing Else in with it): 1,000 mg  
(humans and canines, ¼ dose for cats) 3 times a day on an empty stomach (1 1/2 hours after eating). OR add to Herbal Mix oral dosing.  
The GDU value needs to be at least 2,000. You will find the Bromelain in 500 mg capsules, but must read through each particular version to make sure of the GDU value. You will, obviously, need to take 2 capsules at a time. You then need to wait 1/2 hour before eating or drinking anything food wise.
  - B. Protease: There are various varieties of Protease. So, you will need to look at the label. Protease is found as a combination "package". This is what you are looking for. It will have 5 or 6 other enzymes along with it depending on the brand purchased. The product you originally described might actually be a Protease, but check your label first. You need a Protease product that contains Bromelain in it. Doesn't matter how much -- whatever it is, is fine. you would take this according to the serving size for the particular brand of Protease you purchase/have. This is taken at the same exact time as the Bromelain and 3 times in a given day. Again on an empty stomach and waiting for 1/2 after taking before eating. Another natural product is Glutathione powder a pinch in daily meals is recommended.

## 6. CELL STOP 120 Capsules \*Optimal Health

<https://optimalhealthknowledge.com/products/cellstop?variant=21457767233>

At Optimal Health Knowledge, our 20 year study of the clinical research on such natural, plant based substances has led us to design a comprehensive 17 ingredient formula called Cell Stop, collecting the *most powerful of these ingredients known to science.*

**Curcumin (turmeric)** is nature's most effective, broad spectrum cancer preventative and therapeutic. It turns on tumor suppressing genes. (1) Curcumin inhibits the growth factors cancers cells use to proliferate and suppresses the growth of cancer stem cells. (2) In human breast, esophageal, and colon cancer, curcumin increased the malignant cells' sensitivity to chemotherapy drugs and to the effects of radiation treatments. (3) The Curcumin in Cell Stop is BCM-95, the clinically studied, trademarked form of Curcumin with 7 times the bioavailability of standard Curcumin, containing essential oils of the root like Ar-Tumerone.

**Green Tea** contains a polyphenol called EGCG, which has been shown to suppress tumor growth by blocking the growth of new blood vessels to supply the tumor. (4) Exciting studies show that EGCG suppresses the growth and invasion of human breast cancer cells. (5) Green Tea also increased apoptosis, or programmed cell death, in cancer cells. (6) Our Green Tea contains 45% EGCG.

**Astragalus Root Extract** is known worldwide for its ability to boost white blood cell production from our bone marrow. (7) It has also been shown to inhibit proliferation of breast cancer cells (8) Our Astragalus is a 10:1 extract.

**Turkey Tail** (*Trametes versicolor*) mushroom has over 15 clinical studies that show it reduces tumor growth. (9) In a phase I clinical study of women with breast cancer, it was shown to increase Natural Killer Cell activity, the immune cells that target cancer. (10) Our Turkey Tail mushroom extract is standardized to 10% polysaccharides.

**Maitake** mushroom has decades of studies showing that it boosts the activity of our white blood cells. (11) Clinical studies show systemic anti-tumor immune response. (12) Our Maitake mushroom extract is standardized to 10% polysaccharides.

**Reishi** mushroom has been shown to boost apoptosis, or the destruction of the cancer cell, through the Caspase pathway. (13) It was also shown to reduce tumor growth and rate in Inflammatory Breast Cancer in human trials. (14) Our Reishi mushroom extract is standardized to 10% polysaccharides.

**Quercetin** exerts broad spectrum anti-tumor activity through multiple pathways. (15) Quercetin has shown synergistic effects when combined with chemotherapeutic agents or radiotherapy, while at the same time protecting healthy cells from the damage of such treatments, in a variety of cancers. (16)

**Broccoli Extract** contains components like Sulforaphane and BITC, that induce cancer cell apoptosis. (17) Sulforaphane mediates a number of anticancer pathways, including the activation of apoptosis, induction of cell cycle arrest, and inhibition of NFκB. (18) 4 to 1 extract.

**Bitter Melon Extract** has shown multiple actions against Pancreatic cancer cells. (19) It overcomes Cisplatin resistance in Ovarian Cancer cells by exerting anticancer effects through activation of AMPK and suppression of the mTOR. (20)

**Mangosteen Fruit Rind Extract** contains a minimum of 30% a-Mangostin, which has been shown to inhibit cell growth in many cancers. (21) a-Mangosteen was shown to inhibit

growth and induce apoptosis of breast cancer cells. (22)

**Boswellia Extract** powerfully inhibits NF-kB and 5-LOX, initiators of inflammation, and increases apoptosis. (23) Boswellia increased the cytotoxicity of doxorubicin and cisplatin in Triple Negative Breast Cancer cells. (24) Our Boswellia extract is the clinically studied, patented 5-Loxin, which is 30% AKBA, the most active Boswellic acid.

**Milk Thistle Extract**, in addition to liver protection, has shown an ability to prevent UVB-induced skin cancers. (25) Milk Thistle component Silymarin effectively suppressed cell growth and arrested cell cycle progression in Ovarian Cancer. (26) We standardize to 80% Silymarin.

**Beta Glucan 1,3/1,6** is a well known stimulator of white blood cell maturation and activity. (27)  $\beta$ -(1,3/1,6)-d-glucan boosted dendritic cells (DCs) maturation, and cytotoxic T lymphocyte responses. (28)

**Chamomile Extract** contains Apigenin, which inhibits migration in many cancers. (29) Apigenin suppressed tumor growth, lowered proliferation and enhanced apoptosis in prostate cancer. (30)

**Flaxseed Lignan** Extract reduces growth and metastasis in breast cancer according to studies. (31)

**Pterostilbene** selectively kills breast cancer stem cells, often responsible for reoccurrence of the cancer. (32)

**Se-Methylselenocysteine**, the natural form of Selenium found in vegetables, inhibits growth of prostate cancer. (33)

### **Vegan/Non-Gmo/Gluten Free.**

Whether you are adding Cell Stop to your existing treatment of chemotherapy and radiation, or have already decided to fight cancer naturally, add Cell Stop and it's 17 powerful plant compounds that work together to target and disrupt abnormal cell growth on a cellular level.

## 7. Special type of Vitamin C "Liposomal"

Is an advanced form of vitamin C which releases slowly over a period of time producing maximum cellular absorption of vitamin C. Clinical trials have showed that this form of vitamin C, being coated with phospholipids allows up to 90% of the vitamin C to be absorbed by cells, due to the fact that the phospholipid coating resembles the body fats within the cell walls.

This compares very favourably to about a 20% absorption rate of intravenous vitamin C into cells. The cell membrane blocks much of the vitamin C that is in the bloodstream from getting into the cell. The liposomal membrane is able to fuse with the same material and configuration that resides on cell walls. This results in a lower minimal necessary dosage and saves a tremendous amount of money and stress to the consumer.

This type of Vitamin c is fast acting and safe and non acidic suitable for cancers. Will not cause upset stomach or diarrhea (unlike other vitamin C's when having to take high doses). Liposomal Vitamin C is able to produce serum levels of Vitamin C nearly double those thought theoretically possible with any oral form of Vitamin C.

## 8. Cannabis Oil - containing at least 80-95% THC (for cancer cases)

This oil has saved pets in advanced stages of ill health.  
e.g. Order from [www.bluebird-botanicals.com](http://www.bluebird-botanicals.com)

\* Currently all the commercial medical plants grown and sold to patients have been treated with many chemicals and pesticides therefore would be unhealthy to the body.

Rick Simpson on Utube on this subject. Treating pets and humans.

There is a product called "**buzzkill**" it's a liquid tincture it can help with reducing the high, therefore it's helping a lot of people get their doses up.

<https://www.madefromroots.com/product-page/buzzkill-tincture-1-oz>

Contact us for details on buying Cannabis Oil in Australia.

Email: [animalnaturopathy@gmail.com](mailto:animalnaturopathy@gmail.com)

### **9. (b) Juicing for Humans Page 16**

Most types of cancers can be treated with natural medicines. Please also consider also having daily consumption of 2 litres of Juicing. People are having great results with this juicing regime.

\* Some people have also stated that they have add the Therapeutic Cannabis Oil to their daily regime. Read more about this here. <http://www.cureyourowncancer.org/rick-simpson.html>

### **10 (b) MMS drops – for Pets and Humans**

A potent and effect detox – pathogens and heavy metals.

Ships Worldwide <http://www.mms-supplement.com/buy-mms.html>

### **11. Feed a little plain “Cottage Cheese” with some Organic Flaxseed oil” combined and feed three times a day.**

*E.g ½ to 1 tablespoon of flaxseed oil (depending on size of dog) in half a cup or less of cottage cheese. Some dogs may not like much cheese. So it does not matter if they have a lot or very little of the cheese.*

View **Dr Robert Morse** - YouTube talks on Cancer Cells and how they got there. This is good educational Utubes on important of getting rid of lymphatic congestion of toxins.

Read more about this here. <http://www.cureyourowncancer.org/rick-simpson.html>

- People are having great results with this juicing regime alone. (See next page) (or just fresh carrot juice through out the day only)
- Also pets and people eating cottage cheese and flax seed oil twice to three times a day alone have had amazing results – within 2 months – tumour shrinkage.

Some people have also stated that they have added the High THC Cannabis Oil (with little CBD in it) to their daily regime.

\* Note: Medical Marijuana or Cannabis does not have any cancer healing THC

So whatever you do in the way of supplements and herbal cancer treatments, it is also very important to incorporate the juicing as much as possible – but go slowly.

The "Juicing Regime" below is the biggest support for healing the body.  
**JUICING for humans**

Do not mix fruit and vegetable juices together. The juicing formulas below are from people that were successful in reversing and complete healing of various cancers.

Quotations and articles from: "I escaped from death row – Cancer Jail" Author Barry Thomson. ISBN: 978-0-646-48457-0 Read more in this book.  
[www.cancerjailescape.com](http://www.cancerjailescape.com)

Must be 2 litres (not 1 litre) of "slow juiced" (e.g champion juicer) (72-80 Revolutions per minute)  
juicing of:

*Raw Organic (if possible)*

Beetroots and Carrots

Lemons with skins (chop three into very small pieces to juice)

Organic Garlic cloves (adding two cloves)

Organic Ginger (two cube inches)

Or Natural Pet Pharmacy, can supply the Garlic and Ginger liquid extract to add to juicing each time you make it up.

OR

Rochway - Wheatgrass, beetroot and Carrot (750ml)

Rochway - Papaya 35 (500ml) Probiotic

Success seen with the above juicing, also they added three cancer-killing "supergrasses" - Wheatgrass sprouts – Barley Grass sprouts – Broccoli sprouts. Now these are available from a quality range of organic powders from  
[www.supersprout.com.au](http://www.supersprout.com.au)

**Mix all ingredients together.**

Refrigerate in two litre air tight container. Human - consume of a period of 24 hours. Serious cancer survivors will and have adopted a vegan diet – with no animal protein or dairy products or foods. Taking a B12 capsule daily if vegan living. The results are seen within 2 months of juicing daily of 2 litres.

OR / AND

Take the MMS solution Detox drops. And eat home-prepared food (avoiding fast foods, sugar foods, etc)

Natural Pet Pharmacy

*Caring for Your Pet the Natural Way*

## Topical application

(external and internal organ tumours) e.g. Many people also apply topically to tumour, skin cancer or area on body where internal cancer is seen in MRI scan etc. E.G breast cancer, lung cancer (apply to back were lungs sit).

It is important to take or give your pet internal treatment support as well in the way of herbal formulas to support organs, detox, lymphatic drainage and repair.

\*Suggest Joining FB Groups e.g. Black Salve Healing Support Group & The Bloodroot discussion group.

### Black Salve Paste – topically

**Do NOT apply too much Salve.**

- Anywhere from about 4mm to 8mm "cubed" amount is plenty. Given the small spot to large spot range.
- TIME FRAME FOR INITIAL SALVE APPLICATION: Anywhere from 24 to 72 hours.
- Apply the Salve under a bandage for 24 to 36 hours, and if no reaction,(or not the right reaction), just wait a day or two, then apply the Salve and bandage again. (Some people like to rough up the skin site a bit) This is a Choice.
- Once you have the reaction, you should if possible leave it without any bandage around it at all, and do not touch it. It should be going hard and slightly risen at this stage.
- NOTE: At this point the body and your immune system will take the controls, and your patience is the main focus.

## Other options of Salving

(if in a delicate area i.e. face, vulva or very large areas to treat)

Golden Cream 15ml (organic lecithin, turmeric, fractioned coconut oil)

GoldBlack Paste 15ml (organic lecithin, turmeric, fractioned coconut oil with small amount of Black Salve Paste)

### **Itchy Spots**

Often the lumps or areas over the internal cancer areas may become itchy. If there is severe itching here are some suggestions for relief: Mix equal proportions 50/50 of White Vinegar and Apple Cider Vinegar and apply to the itchy area, to soothe. Or Spray or drip 1 -2 drop of Clove Bud Oil (essential oil) on itchy area, or tumour.

The skin cancers will dry up and drop off, and internal cancers will also shrink and die off and pass through the lymphatic system. Supporting immune and lymph system (using the Herb Immune) will avoid lymph nodes will become inflamed with swelling.

**TOPICAL Pain prevention** : Before treating topically always apply the Clove Bud essential Oil - lightly spray on area, or apply a couple of drops of the HAMPL Clove Oil drops. Repeat as often as needed.

Also add some organic (petroleum free) Paw Paw ointment around tumour to keep area clean and moist , if needed, however it's a little harder to do this with furry species.

**Cannabis Oil** – using Topically (worked for some people and pets but its not just this that will cure its more than one healing protocols)

You will need high levels of THC oil (chemical tetrahydrocannabinol) (many oils and oils called “medical cannabis oil” are high in CBD only) however try to get more of the chemical THC in the oil and apply topically.

But first - Warm and mix it with coconut oil... Before you apply make sure you clean the area well. Applying a hot wet rag for a minute or two to open up the pores will help the topical application sink further. Some people have applied a heap of the oil (using a toothpick) onto the raw skin after the eschar has lifted (cancer cells scab) and this helps soothes the skin. It is also been used topically for skin cancers.

**Contact our clinic to help us guide you.** “Medical Cannabis Oil ” support for all species in Australia and/ or The Rick Simpson E-Book Email: [animalnaturopathy@gmail.com](mailto:animalnaturopathy@gmail.com)

## Rarer type are the FUNGUS TYPE TUMOUR GROWTHS

“fungating tumour” ulcer type growths (see picture)

This a different type of growth (not for Black Salve treatment). This type of tumour is different to other tumours, so using the Black Salve Paste topically is not effective. Ulcerating cancers are also sometimes called fungating tumours. The term fungating comes from the way the wounds grow in the shape of a fungus or cauliflower. The wounds start when a tumour growing under the skin breaks through the skin's surface. They can also develop from skin cancers such as melanoma.

\* **Also take systemic and cancer mix herbs internally, change diet.**

\* FUNGATING TUMOURS – apply organic Dijon mustard paste once a day. (powder and water mixed together)

## TOPICALLY for skin cancers and other tumours.

You may choose to use some or all of these:

**Black Salve Paste (topically) at the same time.**

**Cannabis Oil (THC-CBD combo) as well (internally and externally)**

**GoldBlack Paste** (mixed with some Golden cream and small amount of BS)

If a very large tumour, then it maybe better just to use the GoldBlack Cream with 30% of Black Salve paste and 70% Golden cream, topically and/ cannabis Oil, in conjunction with taking internally the HERBAL Systemic Detox 50ml drops. A month later when finished the herbs we go onto the HERBAL Cancer Mix 50ml drops (bloodroot herb mix, Essiac herb mix)

- Please contact us if you did not get the instruction sheet for application of Black Salve Paste.

## Liposomal Vitamin C gel (satchels)

This amount is good to get you started for a fast healing response.

We have just supplied a sample of them for certain cancer types.

You can order a box of the Liposomal vitamin C gel satchels from suppliers.

e.g.

Australia

[https://fitnessfreaks.com.au/sale/livon-laboratories-lypo-spheric-vitamin-c.html?gclid=EAIaIQobChMI2teRpKmu1gIV2gMqCh28KA-hEAAYBCAAEgKhBvD\\_BwE](https://fitnessfreaks.com.au/sale/livon-laboratories-lypo-spheric-vitamin-c.html?gclid=EAIaIQobChMI2teRpKmu1gIV2gMqCh28KA-hEAAYBCAAEgKhBvD_BwE)

USA

<https://www.amazon.com/Lypo-Spheric-Vitamin-Bioavailability-Professionally-Phospholipids/dp/B000CD9XGC>

Vitamin C is an ~ *antibiotic* ~ *anti-toxin* ~ *anti-oxidant* ~ *anti-histamine* ~ *anti-viral* ~ *anti-depressant*. Vitamin C is an exciting new vitamin c supplement utilizing Liposomal Encapsulation Technology for maximum Bioavailability.

This has a much higher absorption rate with over 90% of the cells being bathed in vitamin C. Experts suggest that liposomal vitamin C is vastly superior to IV vitamin C – an expensive but effective procedure that is done quite often in hospitals and alternative health clinics.

This combination produces an advanced form of vitamin C which releases slowly over a period of time producing maximum cellular absorption of vitamin C.

Clinical trials have showed that this form of vitamin C, being coated with phospholipids allows up to 90% of the vitamin C to be absorbed by cells, due to the fact that the phospholipid coating resembles the body fats within the cell walls.

This compares very favourably to about a 20% absorption rate of intravenous vitamin C into cells. The cell membrane blocks much of the vitamin C that is in the bloodstream from getting into the cell. The liposomal membrane is able to fuse with the same material and configuration that resides on cell walls. This results in a lower minimal necessary dosage and saves a tremendous amount of money and stress to the consumer. Will not cause upset stomach or diarrhoea (unlike other vitamin C's when having to take high doses).

Liposomal Vitamin C is able to produce serum levels of Vitamin C nearly double those thought theoretically possible with any oral form of Vitamin C.

## Liposomal Vitamin C DOSING - Pet, Animal

This is just an guideline or suggestion.

PLEASE NOTE: This is the type of VITAMIN C is a "a jelly like Vitamin C" type consistency. Therefore, it is "NOT water soluble" (won't dissolve in liquids at all).

However we need to add it to some liquid to oral dose human or pet. It's not an ideal dosing method for small pets, but it can be done. Before each dose, stir gently in the water, then draw up some of the vitamin C gel with water each time as it needs water to be dispensed in so it does not stick to the sides of bowl or glass or other objects.

(I have given the vitamin C in food, but it is not effective given this way, unfortunately) Add your herbal Immune and gumpy gumpy drops together once you have put the gel in some water.

Cat - Kitten – Toy Dog;

Add 1 satchel or 2 capsules (of the gel) into 20ml of water (and can add a little Cat milk to it) Using a oral syringe, draw up the gel with some water. \* approx. 3ml - 5ml - repeating 3 times a day.

SMALL SIPS. Give small squirts side of mouth, until 3 to 5 ml is taken.

Small dog:

Add 2 satchel or 3 capsules (of the gel) into 1/8 cup of water. Using a oral syringe, draw up the gel with some water. \* approx. 5ml - 10ml - repeating - 3 times a day.

SMALL SIPS. Give small squirts side of mouth, until 5 to 10ml is taken.

Med-Large:

Add 3-satchel or 4 capsules (of the gel) into 1/8 cup of water. Using a oral syringe, draw up the gel with some water. \* approx. 10ml - 20ml - repeating - 3 times a day.

SMALL SIPS. Give small squirts side of mouth, until 10 to 20ml is taken.

Large Dog or Animal:

Add 4 satchel or 4 capsules (of the gel) into 1/8 cup of water. Using a oral syringe, draw up the gel with some water. \* approx. 20ml - 30ml repeating - 3 times a day.

SMALL SIPS. Give small squirts side of mouth, until 20ml to 30ml is taken.

IT IS STICKY SUBSTANCE, ADD A LITTLE WATER SO PET CAN SWALLOW IT WITHOUT IT BEING TOO THICK AND GLUGGY.

Do the best you can, so just a little stir and when drawing up it with the oral syringe make sure you draw up the gel and water each time. OR add to the Herbal Immune liquid ORAL DOSING MIXTURE.

Another type of Vitamin C (very different to Liposomal vitamin c)

## Sodiums Ascorbate powder (water dissolvable and synthetic vitamin C)

If you are using the "Sodium Ascorbate Powder" type of Vitamin C, then follow instructions on packet. This type of synthetic vitamin c is fully dissolvable in water for quick oral dosing for acute situations, poisonings, and some types of cancers that affect the blood vessels (acute bruising, bleeding, spleen inflamed)

Or ... if we have suggested you start this type of vitamin c straight away.

This vitamin c is available from most health food stores This product is a synthetic Sodium Ascorbate Vitamin C crystals (non acidic).

\* Dissolve 2 teaspoons in ½ cup of filtered water or warm water from previously boiled water from kettle. Can add a little honey to it for canines. Felines don't like sweet foods or drinks. Oral syringe – side a mouth. 5ml for toy dogs or cats. Or add to meals. Double the dose for larger pets. \* Repeat three to four times a day if your pet has a blood disease – bruising, enlarged spleen etc

Until stable, then can reduce frequencies. To twice or three times a day.

## General Information on Vitamin C

How much vitamin C to use?

Vitamin C is completely non-toxic, so it cannot harm your animal if you give him more than he needs. However, there is a simple method, called the bowel tolerance method, that will help you to work out how much C your animal needs (each animal's requirement will vary, the sicker they are the more they will take and need until it causes loose stools/ diarrhoea. This is not dangerous - simply reduce the dose and the diarrhoea stops.

Vitamin C is water-soluble, which means that any excess will leave the body with the pet's urine. Example: A daily supplement of vitamin C at the rate of about 50-100mg per kilogram your dog weighs will do no harm and can only ensure the continuing good health of your dog. For example: a dog undergoing slight stress should be fed 100mg per kg; moderately stressed dogs should be given 200mg per kg; those suffering heavy stress should be given 300mg per kg; and those subject to very heavy stress should have 350mg of vitamin C per kg of their own weight. However Cancer pets need large amounts regularly. If I told you that there was a magic vitamin that would help your dog to stay young and supple; that it would maintain healthy bones, teeth, blood system, and sex organs; and help to prevent allergic reactions . . . If I told you that this magic vitamin would protect your dog against toxic insults - from substances like arsenic and lead which are all too common in our modern world; and that it would help him to resist infectious diseases and overcome stress . . . And if I told you that bleeding gums, loose teeth, muscle and joint pains, weakness, gingivitis, irritability and skin, eye and nose hemorrhages might be due to the fact that he isn't given this magic vitamin . . . would you rush out and get some? Luckily, there's nothing magic about it, for this vitamin in question is the common or garden

Fact: every pet should be given extra vitamin C in his diet.

Example: small dogs or cats: give a pinch in each meal given. It's one of the most important vitamins on the planet. And while you're at it, take some yourself!

## Here's a few other facts about vitamin C

. . . a high concentration of vitamin C is needed by the adrenal gland to produce anti-stress hormones - so if your pet is undergoing stress of any sort, extra vitamin C will be most beneficial. If he works, or takes lots of physical exercise, C will ensure the full potential of muscle energy. Animals with anaemia caused by iron deficiency should take vitamin C with every dose of iron supplementation. Vit C can help animals with respiratory problems by reducing the symptoms of attack, and by increasing resistance to bacterial and viral infections. Malignant cancers can be treated with high doses of vitamin C as used in bladder cancer, breast cancer (mammary tumours), and cancer of the colon.

**Vaccinations severely deplete a animal of Vitamin C. Avoid any further toxic insult the body. If you allowed another vaccination when your pet is sick or has cancer, it would be like pouring gasoline (petrol) on the fire.**

The essential vitamin known as vitamin C is one of the most important elements in an individual's daily diet. We need Vitamin C to help contribute to good cellular growth, promote function of the circulatory system, and generally help our bodies to develop and maintain themselves. A vitamin C deficiency is a serious issue, and should be caught early and treated with natural foods or dietary supplements that contain plenty of this critical ingredient. Lots of medical experts agree that a vitamin C deficiency is fairly uncommon in most modern societies. Infant formulas and other food sources are fortified with vitamin C in order to prevent some forms of deficiency of this essential nutrient.

If you are forced into proving your pet is fully covered with antibodies, then do the **VacciCheck** (in house antibodies immunity test), your vet will have to order the kit into his clinic, it is \$70AUD and only takes 20 minutes to get test and get results.

The Kits are available worldwide. But you will need to request that your vet orders the kit in his clinic so you can have this in-house testing done.

Using a natural vitamin c to restore your pets health. E.g "wholefood vitamin C" adding powder from caps in daily meals ongoing.

## Digestion

Cancer patients also exhibit shifts in the composition of their **gut microbiota** - a phenomenon called **dysbiosis** - but it's unclear whether changes in the microbiome drive the development of cancer or the cancer drives changes in the microbiome.

### How Problems with Digestion Can Cause Illness Anywhere

Jeffrey Anderson, M.D., wrote an article

#### “How Problems with Digestion Can Cause Illness Anywhere”

this article he explains why you should address the health of the gastrointestinal tract first, no matter what the name of the degenerative disease. He explains that new information on the dynamics of the body make it clear that conditions in the digestive tract affect the entire system. The degradation of the gastrointestinal environment is one of the primary points at which health is lost. What we now know is that the same toxins associated with GI dysfunction are frequently absorbed and distributed to other parts of the body. First they place a burden on the liver and the immune system. If liver overload occurs, there will be spill over, and some of the toxins will be passed on to other organs or tissues.

Often, it's a weak link in the system that will be hit by the damage - an organ that can be anywhere in the body that is most likely to be vulnerable. The vulnerability may be inherited, caused by physical injury, toxic exposure, or poor diet. For example, if the sensitive system is the lungs, toxins that originate in the gut and circulate in the bloodstream may manifest as asthma or allergies.

Len Saputo, M.D., in his article,

#### “Harmful Flora”

also believes that if the gastrointestinal tract becomes out of balance and the liver detoxification system breaks down, our entire immune system can malfunction in three ways. First, it can be weakened and the result called immune suppression disease, such as cancer and AIDS. Second, it can overreact and become hyper-responsive to normal stimuli; this occurs in asthma, migraine, and food allergies. Third, a malfunctioning immune system can cause auto immune reactions, where antibodies target our own tissues, as in rheumatoid arthritis or lupus. Dr. Saputo explains that the gastrointestinal tract is the largest immune organ in our body. 80 percent of all our protective immune globulins are produced in the digestive tract. It doesn't take a rocket scientist to see that when this large, strategically placed immune system member isn't working well, our defenses are lowered and once our barriers are down, it becomes more difficult to defend against invaders.

Taking a Probiotic supplement that provides 50 billion CFUs (colony forming units) of Lactobacillus and Bifidobacteria species.

Good brands are: VSL3 satchels, Renew Life, and Garden of Life brands. And my very favorite - Probiotic 12 Powder maximum support with 200+ Billion CFU's [www.seekinghealth.com](http://www.seekinghealth.com)

Because intestinal bacteria should repopulate fairly quickly, 4-8 weeks of probiotic replacement usually suffices. (Continuing need can signal that something else continues to disrupt resumption of healthy bowel flora that may require further investigation.) If this dose of probiotic is rough on your gastrointestinal tract, a lower potency preparation may be better tolerated, e.g., 10 - 25 billion, for the first few weeks. Long-term, you can nourish healthy bowel flora by including a special variety of fiber, often called “resistant starches,” that yield a “prebiotic,” or bacteria-nourishing, effect that helps intestinal healing (especially if an inflammatory bowel condition is present), reduces risk for colon cancer, and translates into metabolic benefits such as lower blood sugar and triglycerides.

## OTHER helpful herbs if needed anytime.

### Slippery Elm Powder (available from Health food store)

Soothes and heals many conditions, quickly and naturally without the need of any further drugs or invasive procedures.

#### What can slippery elm help with?

**For example:** "Acute" or chronic diarrhoea / scouring

Give some mixture every couple of hours, stop or reduce frequency when improved.

If "chronic inflammations" or occasional diarrhoea – inflammation's. can add mixture (with plenty of water) to daily meals. then reduce frequency when back to normal bowels.

Healing stomach or mouth "ulcers" stomach cancer or Inflammatory Bowel Syndrome, IBS, Intestinal inflammation. (ie Gastritis etc). *Give orally before every meal or add to every meal given.*

**Nutrition Support.** If giving slippery elm as nutrition and healing food you can also add vitamins (crushed) herbal formulas and liquids as suggested or herbal antibiotic or general healing herbs to the mix. (Slipper Elm powder is 100 % natural powder and highly nutritional supplement.)

### Instructions

Make up a mixture for small animals: Mix 1 teaspoon of slippery elm powder in a little cold water(1 tablespoon) to make a liquid mix paste. Then boil the kettle and add half or ¼ cup of hot water, stir well and then let cool before giving some to pet \*for cats - instead of using filtered water, use pink salmon juice and some filtered water for better taste.

### Suggested Dosage amount:

Cat/Toy dog /small species: gently & slowly squirt at the side of mouth 1 ml.

Larger pets (dog, Horse, Calf, Foal etc) Give APPROX. 20ml – 50ml or add to some food.

NOTE: If mixture gets too thick or gluggy – continue to add more fluids to keep it a loose runny liquid mix which will quickly help soothe over mouth ulcers. Repeat before meals for a couple of days (or longer if needed) (also heals stomach ulcers etc)

NOTE: If mixture gets too thick or gluggy – continue to add more fluids to keep it a loose runny liquid mix.

## FACTS Turning off the Cancer Switch.

Reported by Bill Sardi

It wasn't just conventional medicine that got sidetracked by Warburg's discovery. In "the Warburg Effect," tumor cells expel lactic acid as a byproduct, and this later became known as the alkalinity acidity theory of cancer promoted by many pseudo scientists. This spawned a number of books that mistakenly advocated an alkaline diet would cure or prevent cancer. Actually, cancer cells are a bit more acid immediately outside their boundaries than inside due to the expelling of lactic acid. The pursuit of a state of alkalinity appears to be nonsensical. Not only does the absence of acidity in the gastric tract and bladder establish an environment that is conducive to tumor growth, the control of blood pH (alkalinity/acidity) is automatically controlled in a neutral pH range (7.2–7.4). The diet has little influence over the pH of the blood. In 1987 an experiment was conducted where the effects of alkalinity or acidity were examined in bladder cancer. Animals were fed a diet that was somewhat acidic, mildly alkaline or more alkaline. Bladder tumors occurred in 39% of the acidic group, 65% of the alkaline group and 71% of the more alkaline group. Many alternative medical practitioners inexplicably recommend acid forming supplements (*Lactobacillus acidophilus*) for cancer patients, yet they contrarily suggest an alkaline diet. An experiment conducted in 1980 showed that the provision of acid forming bacteria (*Lactobacillus acidophilus*) reduced chemically induced colon cancer in animals from 77% to 40%. Enough said about misdirection since Warburg's discovery.

**Two of these natural molecules**, quercetin (pronounced kwerseetin), which has been shown to produce 80% inhibition of lactic acid at high concentration, and resveratrol (pronounced rez-vairawtrawl), have already been demonstrated to significantly inhibit lactate production and the growth of tumor cells. They are available as dietary supplements.

Quercetin plus resveratrol works far better in this regard over use of either molecule alone. A number of natural molecules strongly influence tyrosine phosphorylation. Among them, vitamin D is a master hormone/vitamin regulator of tyrosine phosphorylation and has been shown to exhibit anticancer effects, particularly via its ability to inhibit the pyruvate kinase enzyme and lactic acid. Quercetin has also been found to inhibit tyrosine phosphorylation. You won't hear of any of these natural molecules from your oncologist, but they are among the most promising anticancer molecules in existence. Consider the fact that resveratrol blocks cancer at all three stages of development — initiation, growth and spread (metastasis), something no cancer drug can claim. These natural molecules have already been demonstrated to outperform chemotherapy drugs in animal studies. But there is a lot of foot dragging to conduct human studies. Oncologists respond that these natural molecular medicine approaches to cancer prevention or treatment are unproven, but we hear no cry to put them to the test. Recognize modern cancer therapies have largely been disproven. While there is treatment for cancer, there are no cures. If there were, so many cancer patients wouldn't be on an unguided search to find one. Alternative cancer therapies are belittled by conventional medicine when its armamentarium against cancer has a rather limited effect. For example, cancer chemotherapy has been shown to contribute to the 5 year survival of cancer patients only about 2% of the time. **Chemotherapy and radiation therapy for cancer cannot penetrate solid tumors and therefore are largely ineffective.**

## Why do pets become ill or diseased?

Inflammation and infection are signs of toxicities in the body. We continually find the commercial pet food industry guilty of producing an inferior product compared to the normal, natural diet of the early carnivore.

Instead of raw meat, with live vital energy force, and nutrients, we now have a product that is not only lacking of nutrition, but actually contains many harmful chemicals damaging to the physiology of the body.

These come from pesticides, herbicides and fungicides applied to the grains and vegetables and heavy metal (vaccines) contamination from water and soil, as well as the vaccinations, antibiotics, wormers and flea and heartworm and mange treatments and products (is a toxic insecticide products), steroids and cortisones alike.

The adrenal gland is responsible for balancing blood sugar, response to stress, and inflammatory conditions.

The liver is the paramount organ in the body; it is not part of the endocrine system but is responsible for the health of the endocrine system and all organs by its ability to detoxify all foreign chemicals, its function as part of the immune system and producing bile necessary for the breakdown of fats.

### Effects of toxic overload in different parts of the body:

- Arthritis--the toxins go to the joints.
- Renal failure--the kidneys can no longer function properly as a result of toxic overload.
- Liver failure--the liver cannot function because it is full of contaminates, cancer always start from the Liver/weakness. Liver damage happens from the drugs we give them monthly, bi monthly and yearly.
- Breathing difficulty--the lungs are full of contaminates causing oxygen deprivation among other difficulties. All of us know oxygen is paramount to health. Inhalant pesticides or insecticide sprays etc.
- Tumors--the body is trying to push the toxins out of the body. It has found a weakness in a particular tissue and now you see the tumor with your naked eye. Cysts (protein wastes) are resulting.
- Skin problems--the skin is the largest organ of the body, hence the first clues of toxic overload or reaction usually appear as skin problems and itching.
- Cancer--contaminated blood will cause irregular cells which are how cancer is medically described.

- Ear problems--continual use of antibiotics and other toxic drugs will cause severe ear issues.
- Diabetes--as a result of nutritional deficiencies.
- Epileptic seizures—toxin of the chemicals where a pet has sensitivity to many chemicals has reached the brain tissues. Therefore by switching to a natural diet only, and only using natural products, is a start to good health. There is very limited success in any kind of therapy until the body is detoxified and can maximally utilize the aerobic of, homeopathy, herbs, vitamin supplements, or other healing modalities.

## Where do these Toxicities come from?

Mercury - Insecticides, pesticides and chemical fertilizers and from canned fish.

**Medical drugs and latex paints:** Eg. Copper from water pipes, meat (feed Additives) copper pots, hormones and water-softening chemicals.

Veterinary / Medical drugs including anaesthetics, antibiotics, sulfa type drugs, diuretics, anti-convulsants and steroids, heart worm, flea, wormer and mange drugs (are all insecticides that poisons the blood) – all these toxins cause Liver damage, not just from short term, but many animals have an overuse, Or overdosing on more than one type of drugs at the same time.

Lead - found in canned commercial food, tap water, drug insecticides (i.e. wormer, flea, heartworm, mange).

Aluminium - Aluminium cans, cookware and food bowls, foil and tap water.

CANCER in Pets starts at the liver (damaged/weakened Liver)

Known Carcinogenic foods which have food additives, dyes, preserves, by product meats, which ALL contain Liver damaging chemicals FOUND in our pet tin food. Be safe and home prepared meals – inexpensive way.

EG. Ethoxyquin is used as a preservative. (EG . IAMS & UKANUBA BISCUITS ) and BHA/BHT in pet foods have been implicated in Liver damage and Liver cancers, as have nitrites/nitrates, sodium benzoate (highly toxic to cats Liver) and propyl gallate.

**Commercial Diets too low in protein, high in ash, phosphors, fats and sugars (tooth plaque), also causing liver and Kidney damage. Change the diet, omit all chemical toxic insult to the body and see the health changes!**

## The Importance of the Function of the Lymphatic System

The lymphatic system works in close cooperation with other body systems to perform these important functions:

- ♣ The lymphatic system *aids the immune system* in destroying pathogens and filtering waste so that the lymph can be safely returned to the circulatory system.
- ♣ To *remove excess fluid, waste, debris, dead blood cells, pathogens, cancer cells, and toxins* from these cells and the tissue spaces between them.
- ♣ The lymphatic system also *works with the circulatory system to deliver nutrients, oxygen, and hormones* from the blood to the cells that make up the tissues of the body.

In lymphedema affected tissues, the lymph is unable to drain properly. Instead within these swollen tissues the protein-rich lymph becomes stagnant. When bacteria enter this fluid through a break in the skin, they thrive on this protein-rich fluid. It is for this reason that lymphedema affected tissues are prone to infections.

The five most universal and obvious symptoms of a lymph system in distress.

.... ***fatigue, ... fever, ... loss of appetite, ... irregular sleep.***

EXAMPLE: There are seven (7) stages resulting from a lymph system that gets overburdened with toxins.

### **Stage One ENERGY**

when body starts being overloaded with toxins.

Symptoms are seen as: Less energy (energy is being zapped). Some loss of appetite at various times. With PETS you may notice not such a big eater anymore, or lack of interest in eating as much food, turning up for food and not really eating that much each time or occasionally not eating a meal. If not corrected or more chemical foods or toxic drugs are given then stage (2) develops.

### **Stage Two FEVER**

Toxaemia of the body (Toxemia: A medical condition that occurs when there is a release of toxins from bacteria within the bloodstream). Heat is necessary to accelerate the elimination of toxins. Heat acts as a catalyst which causes the toxins to liquefy and pass into the bloodstream, where they are transported to the organs of elimination (bowels, bladder, lungs, and skin) and thus out of the body.

**Symptoms are seen as:** Fever, Hypotension, Rash, Diarrhoea, Vomiting, Myalgia, Mucosal inflammation, Disorientation, Confusion, Hallucination, Tachycardia, Pharyngitis, Conjunctivitis. Multisystem dysfunction - Septicemia, Bacteremia. Local bacterial infection - although not in the blood, the toxins from local bacteria can cause toxemia from certain infections: Diphtheria, Tetanus, Toxin shock syndrome.

**If not corrected or more chemical foods or toxic drugs are given then stage three(3) develops.**

### Stage Three : IRRITATION

The skin is not only the body's largest organ but also an organ of elimination. Not everyone (human or pet) experiences itchy skin in a state of irritation.

**Symptoms are seen as:** maybe less inclined to eat in the mornings. Feeling some nausea, particularly in the mornings when the body is in its elimination cycles. (Elimination cycle is 4am to 12 noon). Some loss of appetite, not such a big eater anymore, or lack of interest in eating as much etc. Another form of irritation is a persistent tickling sensation in the nose. Pets or humans act jumpy or uneasy or on edge, so that you "fly off the handle" or over reacting to noise etc. for no real apparent reason. Other symptoms for humans Nervousness, Depression, Anxiety and Worry, Headaches, Minor aches in body, Difficulty falling asleep, Gaining weight, Bad breath.

**Pet symptoms:** Allergic Bronchitis, Sinusitis, Miliary Eczema, and other Skin Problems, depression, anxious, jumpy.

### Stage Four : INFLAMMATION causes pain

Toxins have usually been concentrated in a particular organ or a particular area of the body for a massive eliminative effort. Common Pet symptoms: IBS - Inflammatory bowel diseases are classified according to the type of inflammatory cell infiltrating the gastrointestinal wall.

*Eosinophilic Enterocolitis* is the second most common form of IBD, eosinophils may be found in the stomach, small intestine or colon, *Granulomatous (Regional) Enteritis* in which macrophages are found in the lower small intestine & colon.

If the inflammation is restricted to the large intestine it is referred to as *colitis*, if the small intestine is involved it is referred to as *enteritis* & if both the large & small intestine are involved it is referred to *enterocolitis*, if the stomach is involved it is referred to as *gastritis*. That area becomes inflamed due to the constant irritation of toxic material. In general

Symptoms are seen as: Lots of pain and discomfort.

**Lymph system is in major STRESS!** If not corrected or more chemical foods or toxic drugs are given then stage (5) five develops.

### Stage Five : ULCERATIONS

Lesions or ulcers can occur inside or outside of the body. The body will heal the ulcers if the level of toxemia is sufficiently lowered.

Symptoms are seen as: Gastritis in dogs and cats and Ulcerative Colitis ie Stomach ulcers, (deep ulcers are punched-out areas involving all layers of the stomach wall. Ulcers can be single or multiple, and can range in size from less than 1 inch (2.5 cm) to several inches in diameter. Ulcers occur more often in the stomach than in the duodenum). Mouth ulcers, externally sores on body. Eg Humans we see in the elderly Canker sores on arms and legs. If not corrected or more chemical foods or toxic drugs are given then stage (6) six develops.

## **Stage Six : INDURATION**

Induration means, in terms of pathology, (pathology is the study & diagnosis of disease through examination of organs, tissues, cells and bodily fluids) (a) hardening of an area of the body as a reaction to inflammation, hyperemia, or neoplastic infiltration, or (b) an area or part of the body that has undergone such a reaction. Most often this term is used to describe dermatologic findings.

Symptoms are seen as: scarring is a form of indurations. The toxic material that is threatening the well-being of the body is encapsulated in a sac of hardened tissue. The sac is a type of tumour and is very often diagnosed as cancer when, in fact, no cancer exists.

**If toxins continue (constant poisoning) cells will go wild in this manner the condition is called cancer. Stage (7) seven develops.**

## **Stage Seven : CANCER**

At this stage, cells multiply wildly in an unorganised manner. Cancer can still be arrested and reversed, but it would take a diligent, concentrated effort. If warning signals are suppressed with more drugs or ignored, the toxic overload will not be removed, more serious illness will ensue with the final end point being cells driven crazy. Offer Liquid meals ONLY for one day per week for animal. This will help the lymphatic system detox. In conjunction with using the homeopathic Lymph formulas.

## TREATING YOUR DOG'S OR CAT'S CANCER

Rick Simpson

In my opinion, there is no better medicine to give to an animal. I treated my own dog with wonderful results.

It is a known fact that dogs have a much faster metabolism than humans. In many cases dogs heal so rapidly, that you can almost see it happening. Therefore, do not need as much. Whereas felines are fine with a lot more of the oil.

If you have the proper oil, (home grown), I do not know of any treatment that is more effective to treat cancer in dogs or humans and usually dogs can be cured of this dreaded disease in a very short time. Usually dogs only require a few grams of this oil to rid themselves of cancer, so if I were you I would get the dog on the oil as soon as possible.

When treating dogs internally with the oil there is very little to be concerned about, for if the oil was produced from strong medicinal strains of Indica they have a very sedative effect and even if you gave a dog far too much it would simply go to sleep, but once the dog awakened you will find that it has not been harmed.

The oil cannot cause harm to the dog even if you were to give the dog far too much, if you have the proper oil all it would do is cause the dog to sleep and when it awakens it will be unharmed.

If I were you I would start the treatment with two drops a day, once in the morning and once in the evening and then slightly increase the amount the dog is taking every four days until the dog is cured.

As for treating the dog externally, all you have to do is apply the oil and cover it with a bandage and then apply more oil every three days, I hope this will answer your questions about treating this dog properly.

### CAT

Dogs love to take the oil, but often cats can be somewhat indifferent to taking strong tasting herbs, so you may encounter some problems in getting the oil into the cat, so I would just try to mix a small amount of oil in with their food. Animals heal very quickly when compared to humans and since the oil presents no danger, there is no need to worry about the oil harming your cat, even if you were to give the animal far too much.

I would start the CAT off by giving it two doses a day twelve hours apart and I would give the cat about a half a drop per dose, then after four days at this dosage it can be raised to one drop per dose. I think you will find that your cat will respond very quickly

to this treatment and don't be concerned if the animal sleeps a great deal, for this is the effect the oil is supposed to cause. It usually takes only a small amount of oil to heal a cat and once the animal has ingested one or two grams, I think you will witness quite a dramatic improvement in the animals overall health.

Cannabis is NOT too strong for a cat.

I used my tincture, which is agave not alcohol based, CBD oil, FECO and hash water to cure my 14 year old Siamese mix of stage 4 liver failure and stage 4 liver cancer in both lobes last year. July 18, 2016 Sasha was given 1-3 weeks. By August 31 her liver completely regenerated itself. I have the chem panels as proof.

It's dogs you have to be very careful with. Their metabolisms are different and they don't tolerate cannabis the way cats do.

## *Hemp and Cannabis:* Is there any difference?

When trying to wrap your head around the differences between hemp and marijuana, it is important to begin with this simple fact: both hemp and marijuana come from the same species of plant.

"A Practical and Natural Taxonomy for Cannabis" explains it since 1976:

*"Both hemp varieties and marijuana varieties are of the same genus, Cannabis, and the same species, Cannabis sativa.*

*Further, there are countless varieties that fall into further classifications within the species Cannabis Sativa."*

The main difference, especially regarding the oils, is in a number of cannabinoids; THC and CBD, that they contain.

There are close to four hundred natural compounds in both marijuana and hemp, understanding the two that stand out the most: tetrahydrocannabinol (THC) and cannabidiol (CBD) is the key to understanding hemp oil and cannabis oil.

THC is the cannabinoid that is responsible for giving a high or 'stoned' feeling.

CBD, on the other hand, is not psychoactive and has attracted a lot of attention from researchers and experts.

## HEMP OIL Vs CBD OIL: The need for Clarity

### Hemp Seed Oil

Hemp seed oil is a hemp extract taken from the seeds of the plant. Industrial hemp is the only plant used for this type of hemp oil. The seeds of the hemp plant can be cold pressed peeled and unpeeled (preferably cold), to create a delicious oil. There are no cannabinoids such as THC or CBD present in the oil since hemp seeds are not psychoactive. Hemp oil is legal in most countries and can be found in food markets, together with more common types of oil, like olive oil.

Hemp seeds oil is known for its great taste and for the high values of unsaturated fats, such as Omega 3 and Omega 6. It can be used in many different applications such as Lotions or soaps, a base for plastics, instead of petroleum and eco-friendly paints.

### *Cannabis Oil*

Cannabis oil is made by extracting the resin of the female cannabis plant, for example with a solvent. After the resin is dissolved in the solvent, the solvent is evaporated to leave the concentrated extract behind. What is left is an extract with THC and/or CBD, that can be blended with hemp seeds oil, olive oil or other types of oil to facilitate ingestion.

### *CBD Oil*

CBD-Rich Oil is a specific oil that contains CBD and doesn't contain THC. CBD-Rich oil is obtained via extraction made from cannabis flowers, most of the times from hemp strains rich in CBD. Then this extract can be mixed with hemp seeds oil, olive oil or other types of oil to facilitate ingestion. These CBD-Rich oil products are non-psychoactive.

**Quote on Quote:** [www.phoenixtears.ca](http://www.phoenixtears.ca)

Rick Simpson:

### **“THC is the chemical that kills cancer cells”**

\*CBD in hormonal driven cancer is of some benefit, (e.g. Breast cancer) otherwise all other cancers the higher the THC, the better. The higher it is the better chance of being healed. You gotta have the THC.

It will make you high, but you will come immune to it, within a month (which you will be gradually built up to taking 1 gram a day of oil).

There is a product called "buzzkill" it's a liquid tincture it can help with reducing the high, therefore it's helping a lot of people get their doses up.

<https://www.madefromroots.com/product-page/buzzkill-tincture-1-oz>

CBD does help seizure cases, but you will see that the pet or human still continue have some seizures, but if you add some THC to it, so no more seizures. ... Never underestimate THC. Autism for example, giving CBD does not work, but if you give THC, yes it has a positive effect. There is well over 100 cannabinoids, and they are trying to separate them and saying this is good for this and this one is good for this etc. No, just take the whole plant.

**Blood Pressure** Be aware when commencing treatment with “Cannabis oil” that it will “lower your blood pressure”, so if you or your pet are currently taking blood pressure medication, it is very likely that you will no longer require its use. If you or your pet aren't on high blood pressure drugs, and are getting low blood pressure symptoms, one can take the **Herb Licorice Root tincture** (liquid) in some tasty liquid or in capsule form. Repeat a capsule three times a day. Or 20 drops in some juice three times a day. If not enough, take 2 capsules 3 x daily with banana (potassium). Or add three dropperfuls in some juice or water and take three times a day.(add powder or liquid to some taste liquid for canines, but pets seem to handle cannabis better than humans)
