Holistic Animal Remedies

AN177, AN29	HeartWorm "positive" or "prevent" in a dog NATURAL HEARTWORM SOLUTION	16 Pages
* See herbal formula - HAMPL HerbaWorm 225 100m (for regular intestinal worms, and also use for prevention of heartworm in dogs)		
Last Updated: 08-09-19 All Species (except not for horse)		

A safe and effective alternative for heartworm "positive" pets - of all ages. It is safe and proven with no side effects or problems, the elderly or sick advanced stage of heartworm infected pet, can be safely assisted from heartworm.

PREVENTION

HEARTWORM • - "PREVENTION" - using the HERBAL formula:

Give a herbal dose once a day, during high mosquito season of the year. If high-risk area all year, give a dose 3 times a week ongoing. Full dosing instructions provided.

OR / AND

HEARTWORM - "PREVENTION" - using the HOMEOPATHIC formula:

Give a homeopathic dose, can be added once a day to meals in high season, and high or low-risk areas, can stir in 4 drops into water dish once a week. Full dosing instructions provided.

E.G One Bottle of the HeartWorm Free 177 200ml will assist several small dogs - prevention and or health solution for positive heartworm.

HEARTWORM POSITIVE

(AN177) **“Herbal “ formula**

HAMPL HeartWorm Free 177 200ml * brown liquid **TREATMENT**

* Refer to Bottle label for how much to give for different size dogs.

Refer to **Page 3** For further Instructions and **Page 4 -5** supplements to add to meals.

and / or

(AN293) **“Homeopathic” formula** (Dr Deva Khalsa’s DVM formula)

HAMPL Heart Worm 293 100ml * clear liquid **TREATMENT**

* Refer to Bottle Label for dosage instructions.

Example

EASY DOSING: Apply a 2- 4 drops on the body, (e.g top of head to reach the skin). Repeat twice a day for 16 - 32 weeks.

The Heartworm nosode helps the body’s cellular memory to build a defense against the parasite should it come in contact with it, thus enabling the body to take care of the problem at the early stages so no further development could occur.

GUIDE- After three months, ask your vet to run an occult heartworm test once every two months to monitor your dog’s progress. It may take two to five months for testing to show as negative but Dr. Khalsa has had great success with it.

(AN225) **“Herbal” formula**

HAMPL HerbaWorm 225 formula 100ml * brown liquid **PREVENTION**

(also used for general intestinal worms as well Heartworm)

TREATMENT HERBAL - ANIMAL DOSAGE SCHEDULES

Give a dose (according to size dog - see bottle label) twice (2) daily diluting it first. Either mix in a piece food & hand feed. Or mashed up some plain sardines hand feed before meals or the best way to get into the blood stream quickly is add to diluting in some tasty liquid and oral syringe side of mouth. (e.g add ½ teaspoon of Slippery elm powder to 1/4 cup of hot boiled water from kettle. Stir well. Then oral syringe the full amount in small sips at a time.

Do this for 2 weeks.

Then after two week you could start adding into meals twice a daily. (or continue dosing orally dosing twice a day)

So continue for a total of 16 - 32 weeks twice a day. The Antigen will remain in system for 7-9 months after death of worm.

.

Plus

IMPORTANT .. See **Page 4 -5** Vitamin Supplement needed to support healing.

Holistic Animal Remedies

Heartworm positive dog. Support your dog with the following supplements and homeopathic remedy.

1. Bromelain Capsules * from www.iherb.com

The formula should be used in conjunction with Bromelain Capsules.

Bromelain is an enzyme extracted from pineapples and is also an anti-inflammatory. The enzyme also helps break down the dead worms. Bromelain is available at many health stores or online from iherb.com and the recommended **starting dose is 30mg per lb of body weight**, divided into two or three daily doses and given two hours away from meals.

2. PABA 500mg 100 Capsules * from www.iherb.com

Open cap and add the powder to meals. Most capsules are 500mg per capsule.

Small dog to large dog: add full capsule of powder to meals

Toy dog (3.6kg (8 pounds)), add 1/2 powder from each capsule. Twice daily in meals.

3. Magnesium (Minerals) * Powder (from capsules)

Magnesium - this critical mineral is responsible for over 300 enzyme reactions and is found in all of your tissues — but mainly in your bones, muscles, and brain. This critical mineral is actually responsible for over 300 enzyme reactions and is found in all of your tissues — but mainly in your bones, muscles, and brain. You must have it for your cells to make energy, for many different chemical pumps to work, to stabilize membranes, and to help muscles relax. We suggest perhaps using the **Magnesium Taurate capsules** as this supports the heart as well.

Magnesium - There are different types of Magnesium and some are not recommended as being well absorbed. RECOMMENDED: ~ **Chelated Magnesium powder, Magnesium Glycinate powder, Magnesium Taurate powder** is far better absorbed than magnesium oxide but is more expensive. Complementary medicine practitioners rely on chelated magnesium, such as magnesium glycinate, taurate and orotate (magnesium plus amino acids) to treat serious cases of magnesium deficiency. This kind of magnesium's have a less laxative effect on the intestines than magnesium citrate, so they are recommended if you tend to have loose stools. * **Magnesium Taurate is a combination of the Amino acid Taurine and magnesium that has special properties for the heart.** Taken together in this combination, magnesium and taurine have a synergistic effect, stabilizing cell membranes, making this form of magnesium highly absorbed. Magnesium Taurate does not have great laxative effect and is the recommended form of magnesium for people with heart problems. It appears that the amino acid Taurine is important for heart health and may prevent arrhythmias and protect the heart against the damage caused by heart attacks. Magnesium taurate requires oral supplementation for six to twelve months to restore intracellular levels.

MAGANESIUM POWDER

If you buy the Magnesium in capsules or powder - E.G. Magnesium glycinate or Magnesium chelated, Magnesium Taurate (can buy from suppliers on the internet)

DOSING GUIDE

Felines, toy dogs, rabbits: Mix 1/4 powder from capsules twice daily meals or milk drinks or dilute and oral syringe.

Small dog or animal: Mix 1/4 - 1/2 of powder from capsule in some liquid or in meals 2 x daily.

Med to large Canines or larger farm animal: add 1/2 teaspoon in some liquid and then oral syringe. Or add the powder to meals or milk drink. Repeat twice daily.

4. Lung congestion?

use the **HAMPL Cough Congestion 129-1 formula** (homeopathic drops).

Repeating drops on the body every half an hour 5 times a day. For times of coughing, apply drops every 5 minutes for 4 treatment repeats. And the herb Hawthorn Berries has also been added to the **HAMPL Heart Worm Free 177** will help heart muscle and function too. You could also add to meals or in liquid herbal dosing

5. CoQ10 30mg Capsules * can get these from www.iherb.com

SMALL TO LARGE DOGS: Open the capsule and add contents. Twice a day as this will help boost the metabolism in the heart muscle and detoxify the body.

TOY DOG: add half a capsule twice a day in meals or milk drinks.

Use In conjunction with the above two supplements. Herbal formulas are most often suggested to be diluted in some food and hand feed that piece of food before feeding rest of meal. If not eating, we suggest diluting in filtered water with honey or slippery elm powder making a runny liquid treatment with suggest amount of herbs and given orally via a syringe (without the needle) **IMPORTANT** if treating heartworm positive dog.

Research & trails have shown it can take up to 6 weeks to kill off WORMS. **Note:** By diluting and giving in liquid it will go into the blood stream a lot quicker compared to diluting in food which then goes through the stomach to be absorbed. * Optional - You could also add the homeopathic “[HAMPL Heart Worm 293 formula](#)”, which is the **homeopathic - heartworm formula**, that can be add to water dish every time you change it, all year through. And for treating heartworm positive pet, apply drops to body twice a day until all clear.

Please be aware

The antigen levels will remain in system for 4 - 8 months post death of worm, (meaning if you get a blood test it may still show positive)

Heartworm Antigen Tests

There are two (2) types of heartworm antigen tests used.

1. The older type of test checks for microfilaria, or heartworm larvae, circulating in the bloodstream. This test was not very accurate and so the heartworm antigen test was developed.
2. A heartworm serology test works by identifying microscopic pieces of heartworm skin circulating in your dog's bloodstream.

Dead worm segments

Dead worm segments take a long time to internally emulsify via a canine's lungs. Therefore, a dog can still show antigen response-hence a positive result if re-testing too soon, and can even have him or her re-visit intermittent coughing spells due to the **temporary lung congestion** (this can happen regardless of the pet having ever coughed to begin with).

* If required also use the homeopathic **HAMPL Cough Congestion 129-1 formula**. This occurrence is the very reason why it's important to keep a dog from excitement as best as possible throughout the entire treatment process and upwards of 8 weeks post treatment - so dead or dying worms do not lodge in an artery thereby causing pulmonary embolism (blockage of blood flow in one or more arteries by the worm segment which can cause death). The huge benefit your pet receives by way of taking the natural (three month) approach is that the chances of having an embolism occur is much less likely than the conventional treatment route. Since that route is designed to kill the heartworms in days, not months. So we are talking a full 7-9 month timespan from the start of our regimen until we should be retesting them. If your pet proves positive at that time (which is unlikely), we repeat just one more cycle shown above.

Enlarged Heart

You need to do a blood test to see if still heartworm positive.

Having a Xray isn't how to retest to see if heartworm positive still. If your vet did only did a Xray of heart saying also your dog has an enlarged heart, then a enlarged heart is from a heart condition which happens as a dog ages.

Or if heartworm damage was at late stage heart then aftermath of damage from clearing heartworm may cause stress on the heart and lungs and arteries long after the parasites are gone. Your dog now needs the homeopathic "Congestive Heart Failure Set"

Cardiomegaly (enlarged heart) causing congestive heart failure - symptoms from - cardiomyopathy, arrhythmias, tachycardia, hypertropic , bradycardia, AF, feline hypertrophic cardiomyopathy. Also heart valve insufficiency can cause enlarged heart - see **AN305 Canine or Feline (MVD) Mitral Valve Dysplasia**, Regurgitation (endocardiosis), Insufficiency or Incompetence, Heart Murmur, Irregular Pulse (cardiac arrhythmia)

Heartworm (parasite)

Most veterinarians will recommend giving a daily or monthly pill or injection to prevent heartworms, but in actuality you're not preventing them; you are administering the cure on a regular basis. This cure for heartworm is "toxic". Of a strong insecticide drug (poisoning the blood). The chemicals are capable of causing disease. The dosage is much smaller than the actual treatment, but when it's administered month after month, the toxic side-effects become a serious health risk.

Signs of heartworm infection: may include a mild persistent cough, reluctance to exercise, fatigue after moderate activity, decreased appetite, and weight loss.

A **cat** is considered a resistant host of heartworms because the worms do not thrive as well inside a cat's body.

Side effects listed for heartworm preventative drugs are:

vomiting, diarrhea, convulsions, and weakness. These pills weaken your pet's immune system which recognizes the chemicals as poison. The body works hard to eliminate the toxins and major organs, like the liver and kidneys, are taxed. For this reason, the pet's body is not able to handle contact with the normal bacterial or viral substances in our world, so it gets sick more easily.

According to the American Veterinary Medical Association, **65% of adverse drug reactions and 48% of all reported deaths resulting from drug reactions are caused by heartworm preventatives.**

The potential side effects of Ivermectin (the active ingredient in Heartgard) include liver problems, vomiting, diarrhea, loss of appetite, depression, lethargy, skin eruptions, seizures, tremors, paralysis, autoimmune disorders, thyroid problems, fever, weakness, dizziness, coughing, nose bleeds, difficulty breathing, pneumonia, irritability, sudden aggressive behavior, nerve damage, fertility problems, and sudden death. Other chemical heartworm preventatives have many of the same side effects.

Reference: <https://www.thewholedog.org/heartworm.html>

cont.....

Dr Karen Becker by the way – heartworm "preventives" drugs don't actually prevent your pet from getting worms. What they do is poison the larvae at the microfilaria (L1-L2) stage of development, causing them to die. **Reference: Dr Becker DVM**

Part of the veterinary industry has acknowledged these dangers. These "alternative vets" are open to natural, safe and effective alternatives. Many of these vets believe that the long-term use of heartworm prevention drugs are a link in the chain of diseases such as arthritis, liver and kidney diseases, skin allergies, and many types of cancers.

Dr.Dodd DVM says, *prevention is always the best cure but the drugs that are given for Heartworm preventative are almost as bad as the Parasite itself. Think about it, giving the insecticide Heartworm drug to a dog to poison his blood to kill any microfilaria that may be deposited by an infected mosquito is poisoned blood! That toxic blood touches every organ in the body.*

The cause of heartworms is mosquitoes.

For dogs, and sometimes cats, they can cause life-threatening problems because they transmit heartworms. These are parasites that enter the bloodstream as larvae and migrate to the heart. Six months after reaching the heart, the larvae turn into adults, and that's when problems begin.

Full-grown heartworms eventually fill the heart, blocking flow of blood to the lungs and doing damage to the heart. By the time you see symptoms, they've already done damage to the heart. Mosquitoes still bite animals on heartworm pills. The key is to get the blood of the pet in a healthy enough condition that the mosquitoes won't want it.

Mosquitoes are a parasite. Herbs that have anti-parasitic properties will discourage not only mosquitoes, but fleas and ticks also. Now we have a choice in providing a Safe and effective Alternative for Heartworm treatment and protection.

For Heartworm positive dogs, acute or chronic conditions, very old or very young, it is completely safe and effective.

Don't ever believe or be told that your dog is too unwell or old to be treated to rid Heartworm .

As this maybe true using harsh toxic chemicals, but with natural herbal formulas there are no side effects or risks.

Many animal health practitioners and Veterinarians

... are now successfully using an alternative treatment and prevention for pets.

In our practice we provide a special combination formula of herbs and homeopathics, being of herbal Blackwalnut, Hawthorn Berries and the homeopathic Heartworm nosode, arsenic alb for prevention and relief in the young and old.

Herbs that have anti-parasitic properties will discourage not only mosquitoes, but fleas and ticks also. **Paw Paw Shampoo** has passed the clinical research as effective for killing ticks and fleas.

Geranium is an essential oil that repels mosquitoes, ticks and fleas and can be used on dog.

Essential Oil Repellent - Make up and use a mist /spray made of Young Living's geranium AND/OR lemongrass, grapefruit and peppermint. I use this on myself as well as the dogs as a great mosquito and bug repellent when I am out in the garden in the evening.

Nice and safe with no worries of toxic chemicals on the skin.

HOMEOPATHIC “HEART WORM” NOSODES

Part of HAMPL Herbal formula ingredients we have included the **Homeopathic Heartworm Nosode** which will help build immunity in a safe, non-toxic way. The nosode is the adult and microfilaria of the heartworm species (*Dirofilaria Immitis*)

Dr. Fudens uses holistic therapies to both prevent and treat heartworm disease. Dogs can be vaccinated using a homeopathic nosode to stimulate the immune system to attack the microfilaria and make the body resistant to the disease. There are no chemicals or poisons. Reference: <http://www.dogsnaturallymagazine.com/heartworm/>

Dr .Steve Marsden DVM is published in the *Manual of Natural Veterinary Medicine* and has used herbal formulas successfully by holistic veterinarians to treat heartworm. Dr Marsden states that the formula should be used in conjunction with **Bromelain supplement**. Bromelain is an enzyme extracted from pineapples. It helps break down the dead worms. Bromelain is available at many health stores and the recommended starting dose is 30 mg per lb of body weight, divided into two or three daily doses and given two hours away from meals.

Dr Patricia Jordan told us she uses a modified version of the formula in her own practice.

Dr Deva Khalsa’s Homeopathic Heartworm Protocol Holistic veterinarian Dr Deva Khalsa has found the following homeopathic protocol to be successful in treating heartworms. Give a few drops orally, twice a day for three months. After three months, ask your vet to run an occult heartworm test every two to three months to monitor your dog’s progress. It may take two to six to seven months for testing to show as negative but Dr Khalsa has had great success with it. **Reference:** <http://www.dogsnaturallymagazine.com/5-natural-heartworm-treatment-alternatives/>

Holistic Animal Remedies

A few comments from veterinarians from the book:

New Choices in Natural Healing for Dogs and Cats: Over 1,000 at-Home Solutions for Your Pet's Problems. **Dr. Michelle Tilghman, D.V.M.** says, "Strengthen [your pet's] resistance with whole foods. Dogs and cats are more likely to resist heartworms when they are given all-natural foods, which help keep the immune system strong.

HAMPL Clinical Vet Research & Studies

.. **Dr. Roxanna V. Knight DVM** who runs a non profit dog rescues clinic, also treats many of her dogs who may have tested Heartworm positive with Black Walnut Hull rather than the painful injections. Clinically proving that the Herbal treatment has been proven a great success!

We did multiple antigen tests throughout the 19 weeks in order to watch what was transpiring. We also collected blood from microfilaria numbers during treatment. From antigen (microfilaria-larvae blood test) shows the level changes, we predicted that the adults (worms) died after 6 weeks of twice daily BWH herbal liquid tincture. Retrospectively, when the test is perfectly clear, i.e. negative, we can confirm. However the antigen (heartworm microfilaria or larvae) will remain in system for 4 -5 months post death of worm. Dogs have had no cardiovascular symptoms from the worms dying off while on the herbal heartworm treatment. We are happy! And all dogs are doing GREAT! **Dr Roxanne knight. DVM (USA)**

.. Hello, Just a note to let you know my order arrived today (DATED 7/16/05)

I'm new to holistic meds, and this is the first summer my collies have looked and acted so healthy. All eleven up till now have been on traditional heartworm meds. Coats have been exceedingly dry and straw like during heartworm season. This summer they started your **HAMPL HeartWorm Free 177** (which I will keep them on year round) they have shed as they should, and coats are Healthy.

.. Also my 10 1/2 y.o. is acting and moving around like a young dog, if someone had told me this would happen by eliminating the traditional HW meds, I never would have believed them. He could hardly climb stairs, now he's romping around playing with the younger ones. Thanks again, **Jean Angus** Massachusetts, USA

Holistic Animal Remedies

DRUG DETOX

Insecticide poison uses as a "HeartWorm" flea, worming products

* Means we have this in homeopathic form to detox from this drug (either a single remedy -drug on request or combination of these drugs if given a number of the drugs over the years or currently etc [See Homeopathic formulas: AN110 and AN042 for the combination detox](#). If you dont see a drug that your pet is taking or did take, please send a tiny sample of it to our clinic and we will post out the detox homeopathic version to you.

SOME OF THE VETERINARY DRUGS GIVEN TO PETS

2. * **PANACUR (worming drug)** * which is classed as a toxic insecticide drug.

Panacur Liquid for Cats and dog , horse and other animals. Fenbendazole, marketed under the brand name Panacur, is a common anthelmintic -- or dewormer -- for cats, dogs, horses and other animals. **SIDE EFFECTS** -The FREQUENT side effects that may occur include infrequent vomiting or diarrhea.

5. * **MILBEMAX (wormer and heartworm drug)**

which is classed as a toxic insecticide drug. Milbemat is a toxic insecticide drug used to control of gastrointestinal worms in pets including roundworm (*Toxocara cati*, *Toxascaris leonina*), hookworm (*Ancylostoma tubaeforme*) and tapeworm (*Dipylidium caninum*, *Taenia spp.*) and heartworm. What are the active ingredients in Milbemax DRUG and how do they work? Milbemax contains praziquantel and milbemycin. Both ingredients act by disrupting the nervous system of the worms resulting in their paralysis and death.

SIDE EFFECTS - Systemic signs (such as lethargy), neurological signs (such as ataxia and muscle tremors) and / or gastrointestinal signs (such as emesis and diarrhoea) have been observed after administration of the veterinary medicinal product.

CUSTOMER COMMENT

Hi I have a 14 year old cat that has had a very bad reaction to Milbemax wormer he had it administered on Tuesday morning and within hours developed neurological symptoms, falling over. he has gone deaf (he was not before) and will not drink or eat. Now its Friday and he still has no appetite and will not touch any food though he has been going in garden and may be drinking from bird bath. have been back to vet and she cant offer any suggestions, they have spoken to Novartis who say have not had any problems but reading this forum and other internet news these side effects are not uncommon. ... He is now steady on his feet but still will not eat, vet has checked throat and swallowing seems to be fine. I have managed to put a few flakes of white fish in his mouth and he will swallow. he seems interested in food but picks it up and drops it. (normally he would eat three sachets of food a day)

We have an alternative, safe and effective products for all species example:
