Last Updated: 13-11-18	

In conjunction with using the homeopathic oral nosodes.

IMPORTANT Avoid any type of STRESS either environmental or physical. i.e. Small enclosures, boring enclosures, no daily "outdoor" time of sunlight & fresh air. Over crowding. Frequent breeding, e.g breeding queens.

**The majority of inflammatory diseases start in your gut.**

Very Important to boost the Immune system and gut flora as this is the first defense system and all conditions start in the gut.

## Probiotics and Immune Boosting

### PROBIOTICS

1. Using a **BROAD SPECTRUM PROBIOTIC** e.g "**Bionutri EcoDophilus**" powder from Capsules and

**2. SB PROBIOTIC Capsules which has "saccharomyces cerevisiae" (boulardii) 250 mg (5 billion CFU)**

A good brand is Henry Blooms ) <http://www.henryblooms.com.au/products/sb-probiotic/>

### IMMUNE BOOST

3. Add 1/2 -1 (or more) teaspoon IN MEALS of a strong immune boosting powder is **ProBoost Thymic Protein**. This will clear or prevent any virus in body. Order from: <https://www.proboostdirect.com/>

Keep the **SB Probiotics (saccharomyces)** and the **Broad spectrum Probiotics** going... doesn't need fridge either but so effective when needed). Animal probiotics are expensive, poor quality and shallow spectrum very often so no need to do that, we share similar biomes.

*Don't get tooling up on differences between animals and humans in regards to the biome .. here is the mechanism ... it's all "one long tube". Mouth affects the gut, and gut affects mouth .. a bidirectional influence.*

The oral microbiome is an important part of the gut microbiome and tending to its balance should a routine part of any good "gut protocol." Indeed, dysbiosis of the oral microbiome (and a leaky oral mucosa) might be key underlying imbalances in the pathogenesis of systemic diseases, including autoimmune as well as cardiovascular

disease.

## Suggested Guide Animal Dosage

Working towards healing your pet's bladder, bowel, kidney and liver conditions, you need to supplement his/her diet with large amounts of probiotics (acidophilus, bifidus and other types of friendly bacteria). Start with small amounts and add to your pet's meals and increase as you go along.

**Canine: adding 1/4 capsule of the powder, and mix well into meals. After a couple of weeks increase to 1/2 cap daily.**

**Feline, toy dog, infant farm animal or other small animals: add a pinch and mix well into meals.**

## How long should I continue this Probiotic and Immune Boost?

Because intestinal bacteria should repopulate fairly quickly, 4 – 8 weeks of probiotic replacement usually suffices. (continuing need can signal that something else continues to disrupt resumption of healthy bowel flora that may require further investigation) If this probiotic is rough on you or your pets/animals gastrointestinal tract, reduce the amount for the first few weeks. At any time you or your pet/animal are put on a chemical antibiotic – please take this probiotic at the same time.

It takes 2 months to fully restore gut flora and immune system may take longer depending on each pet.
